eCBHFA Road safety module

Facilitator guide

The International Federation of Red Cross and Red Crescent Societies (IFRC) is the world's largest volunteer-based humanitarian network, reaching 150 million people each year through our 191 member National Societies. Together, we act before, during and after disasters and health emergencies to meet the needs and improve the lives of vulnerable people. We do so with impartiality as to nationality, race, gender, religious beliefs, class and political opinions.

Our strength lies in our volunteer network, our community-based expertise and our independence and neutrality. We work to improve humanitarian standards, as partners in development and in response to disasters. We persuade decision-makers to act

at all times in the interests of vulnerable people. The result: we enable healthy and safe communities, reduce vulnerabilities, strengthen resilience and foster a culture of peace around the world.

The IFRC is proud to host the Global Road Safety Partnership (GRSP), which has been working collaboratively with National Societies, governments, civil society and the private sector to improve road safety and decrease the global road trauma burden. The Sustainable Development Goals contain two specific references to improving road safety, which is an important addition to the development agenda and one that the IFRC, through the GRSP, are striving to meet.

Acknowledgments

Special thanks to the Jordanian Red Crescent Society, the Global Road Safety Partnership, Swiss Red Cross, and the eCBHFA team for their expertise, ongoing support, commitment and contributions to the development of the eCBHFA Road Safety module.

Thanks also to the following individuals and Red Cross Red Crescent volunteers and staff:

Dr. Judy Fleiter, Global Manager, Global Road Safety Partnership

Dr. Nancy Claxton, eCBHFA Global Lead, IFRC

Ennada Lagouit, Botnar Children Road Safety Challenge Advisor, Global Road Safety Partnership

Sandra Arbid, Health Delegate, IFRC

Ibrahim Al-Ajlouni, eCBHFA Lead, Jordan Red Crescent Society

Vivienne Seabright, Editor

Foreword

.....

This eCBHFA facilitator guide will equip you with the basics of road safety – how it works, and how to support your community with the information and motivation to protect their families. No two communities, or even families are the same, and so the community understanding and ability to adapt our work is critical in this effort.

You are part of a global movement to protect every person from preventable injury. Use of the road comes with unique challenges and represents one of the greatest risks we face in our daily lives. Using the information contained in this eCBHFA facilitator guide will assist in building knowledge among individual community members who can help to reduce the burden placed on every community by road traffic crashes.

Using the guides and toolkit

Road safety volunteer guide

This guide is designed for community volunteers who work directly with community members. The guide contains key information and discussion points to work with community members in understanding risks involved with using the road and how to minimise those risks.

The volunteer guide is comprised of seven topics which include knowledge, tools, talking points and activities for teaching communities in an interactive way.

Road safety toolkit

The toolkit is designed to support both the volunteer guide and the facilitator guide with interactive tools, games and illustrative material. The toolkit is designed to be adapted and modified to local contexts, taking advantage of both local expertise and knowledge and differences in vaccination schedule and approach. Materials has been specifically designed to be printed in black and white or full colour, and with low-resource environments in mind.

Road safety facilitator guide

This guide is designed for staff or trainers of trainers to conduct a training of trainers (ToT) or preparation course for staff and volunteers who will work directly with community members.

The facilitator guide should allow volunteers hands-on experience with all the toolkit materials. Diagnostic tools to better understand community perceptions, barriers and individual concerns are also included. It assumes a two-part training with a core community assessment exercise in between.

The community assessment will help volunteers to best prepare themselves for the unique opportunities and challenges in their communities. Central to the approach is the belief that local adaptation, knowledge and ownership is key to successful road safety training.

Road safety topics

Topic	Contents
1	Road safety behavioural risk factors
2	Seat-belts and child restraints
3	Speeding
4	Helmets
5	Drinking, drugs and driving
6	Distractions
7	Putting it all together

Topic 1

Road safety behavioural risk factors

Overview

Road crashes cause death, injury or permanent disability to thousands of people every day and millions of people every year. This topic identifies major road safety factors and risks that threaten personal health and safety.

Learning objectives

At the end of this session, participants should be able to:

- Identify the major road safety risk factors including not using or misusing seat-belts and child restraints, not wearing or misusing helmets, speeding, unsafe pedestrian behaviour, drinking or taking drugs and driving and using the road when distracted
- Explain the threat of these risk factors to personal health
- Teach road safety behavioural risk factors to their community

Tools

- ❑ Topic 1 tool: Road safety behavioural risk factors
- ❑ Topic 1 tool: Road safety risk assessment card

Preparation

- Write the learning objectives for the topic on flipchart paper and post at the front of the room.
- Prepare copies of the topic and tools for each trainee from the volunteer guide.
- Download your country's profile from the World Health Organization's Glob-

al Status Report on Road Safety 2018 and prepare a copy for each participant.
(https://www.who.int/violence_injury_prevention/road_safety_status/2018/en/)

Suggested outline of activities

Depending on the number of participants and amount of discussion, this topic will take approximately one hour, 10 minutes to complete.

Activity	Time
Introduction	20 minutes
Behavioural risk factors	15 minutes
Reflection	5 minutes
Country road safety trends	5 minutes
Road safety risk assessment	15 minutes
Reflection	5 minutes
Wrap-up	5 minutes
Total Time	70 minutes

Introduction

1. Welcome participants to the session.
2. Introduce and explain the learning objectives for the topic.
3. Explain that road safety behavioural risk factors should be the concern of the entire community even those who do not drive. Explain that there are behavioural risk factors that increase the chance of being in a road crash and that there are behavioural risk factors that can increase the level of injury due to a road crash.
4. Hand out Topic 1 of the volunteer guide: Road safety behavioural risk factors.
 - Explain that participants will be taught how to use two tools during the session and that they will be expected to practise and demonstrate their skill in delivering the tools.
 - Allow approximately two minutes for the participants to become familiar with the volunteer guide topic.
5. Instruct participants to form groups of three or four people. In their groups, participants should read Topic 1: Road safety behavioural risk factors to

themselves or as a group, whichever way they feel more comfortable.

- After reading, the group should discuss the reflection questions within the topic and be prepared to share their responses with the larger group.
 - Allow approximately 10 minutes for reading and discussion.
6. After 10 minutes, hold a quick plenary for general understanding. Monitor responses for evidence of learning.

Behavioural risk factors

□ Topic 1 tool: Road safety behavioural risk factors

1. Hand out Topic 1 tool: Road safety behavioural risk factors.
2. Explain how this poster can be used to start a discussion with community members about factors that contribute to road safety and may help avoid or decrease the level of injury from a road crash.
3. As you hold up the tool, explain each icon.
4. Remind participants that this information is for all members of the community. That is, for drivers, for riders, for cyclists, for passengers and for pedestrians.
5. Ask participants to get into pairs. Give them 10 minutes where they each take turns practising delivering the content.
6. Once the pairs have completed their practice, bring the group together.

Reflection on behavioural risk factors:

- Ask: How do you feel about teaching about behavioural risk factors to your community?
- Address concerns and answer questions.

Country road safety trends

1. Explain that although it is important to behave safely on the road, it is also important to know what to pay attention to so that you can improve your safety.
2. If you are able to, give some road safety data from the most recent official road traffic report produced in your country. In addition, hand out your country profile from the World Health Organization's Global Status Report on Road Safety 2018. This usually gives road safety data by road user type. Point out the data that show the number of deaths and identify the most problematic risk factors and the road users mostly affected by road crashes.
3. Explain that this information may help them choose the topics they will deliver in their community sessions. Additionally, sharing this information within the community might help the community members determine other ways that road crashes can be prevented.

Road safety risk assessment

□ Road safety risk assessment card

1. Hand out Topic 1 tool: Road safety risk assessment card.
2. Explain how this card can help individuals determine their own behavioural road risks.
3. Ask each participant to complete the assessment card. Give them a few minutes to complete.
4. Explain how the assessment is scored and ask each participant to score their assessment card. They do not need to share this score with the other participants if they prefer not to.
5. Hold a discussion in plenary session about how they might use the assessment card and the assessment scores. Ask: How might these scores be used to help lower safety risks and improve road safety?

Reflection on behavioural risk assessment:

- Ask: How do you feel about teaching behavioural risk assessment content and using this tool with your community?
- Address concerns and answer questions.

Wrap-up

1. Review the learning objectives on the flipchart and ask the participants if they feel they have achieved each one.
2. Ask for any further questions or concerns. Revisit any areas where doubts are raised.

Topic 2

Seat-belts and child restraints

Overview

Using seat-belts and child restraints in a moving vehicle can help protect people from serious and fatal injuries to the head, chest and abdomen. This topic explains how seat-belts should be worn, and identifies different types of child restraints.

Learning objectives

At the end of this session, volunteers should be able to:

- Identify the types of injuries that a person can sustain if they do not use seat-belts or child restraints
- Identify the appropriate type of child restraint for every child's age, weight and height
- Teach seat-belt and child restraint content to their community

Tools

- ❑ Wearing versus not wearing a seat-belt
- ❑ How to wear a seat-belt
- ❑ Types of child restraints
- ❑ Safe in my vehicle chart and cards

Preparation

- Write the learning objectives for the topic on chart paper and post at the front of the room.

- Prepare copies of the volunteer guide topic and tools for each trainee.
- Other supplies needed: scissors, sticky tape/glue.

Suggested outline of activities

Depending on the number of volunteers and amount of discussion, this topic will take approximately one hour, 15 minutes to complete.

Activity	Time
Introduction	20 minutes
Seat-belts	15 minutes
Child restraints	10 minutes
Reflection	10 minutes
Safe in my vehicle	15 minutes
Wrap-up	5 minutes
Total Time	75 minutes

Introduction

1. Welcome volunteers to the session.
2. Introduce and explain the learning objectives for the topic.
3. Explain that the appropriate use of seat-belts and child restraints is an important way to protect themselves and their children during a road crash or in a situation where heavy braking is needed in a vehicle. This topic should be of concern to everyone within their community.
4. Hand out Topic 2 of the volunteer guide: Seat-belts and child restraints.
 - Explain that volunteers will be taught how to use four tools during the session and that they will be expected to practise and demonstrate their skill in delivering the tools.
 - Allow approximately two minutes for the volunteers to become familiar with the topic in the volunteer guide.
5. Instruct volunteers to form groups of three or four people. In their groups, volunteers should read Topic 2: Seat-belts and child restraints to themselves or as a group, whichever way they feel more comfortable.
 - After the group has completed reading, the group should discuss the reflection questions within the volunteer guide topic and be prepared to

share their responses with the larger group.

- Allow approximately 10 minutes for reading and discussion.
6. After 10 minutes, hold a quick discussion for general understanding. Monitor responses for evidence of learning.

Seat-belts

❑ Wearing versus not wearing a seat-belt tool

1. Explain that there are three types of collisions when a road crash occurs: 1) the vehicle collides with another object (vehicle, signpost, tree, etc.) or a human or animal, 2) the body of the occupant hits the inside of the car, and 3) the internal organs of the occupant hit the chest wall or the skeletal structure.
2. Explain how an unrestrained person keeps moving when a crash occurs and how the use of a seat-belt or child restraint can decrease the severity of the injury.
3. Hand out **Topic 2 tool: Wearing versus not wearing a seat-belt**
4. Explain how this tool can be used to start a discussion with community members about how the use of seat-belts and child restraints may help decrease the level of injury from a road crash.
5. Using the tool, explain that seat-belts:
 - Help to restrict the forward movement of the vehicle occupant when a crash occurs and can prevent a person from being ejected
 - Distribute the force of the crash over the strongest parts of the body, which protects sensitive body parts like the head, the chest and the abdomen
 - Protect other occupants in the vehicle since a person without a seat-belt can be thrown around and hit others
6. Explain that airbags do NOT replace the need to wear a seat-belt. The air-bag is designed to work together with a seat-belt to protect vehicle occupants.
7. Hand out **Topic 2 tool: How to wear a seat-belt**. Explain to volunteers that it is not enough to wear a seat-belt to protect ourselves from injury in case of a crash. The seat-belt must be worn the right way for better protection against injury. Using the tool explain the correct versus the incorrect way of wearing a seat-belt for adults, pregnant women and children.

Child restraints

❑ Types of child restraints tool

Explain that due to physical force applied to the body when a collision occurs that babies and children are not safe in an adult's arms. Explain that using a seat-belt for an adult and a child they are holding is dangerous for the child.

Explain that child restraints are specially designed for babies and children to hold them in place during a road crash.

Hand out **Topic 2 tool: Types of child restraints**

Using the tool explain the four types of child restraints emphasizing that the type depends on the age, weight and height of the baby or child.

Explain that in order to protect the baby or child that the child restraint must be properly installed. This means carefully reading and following the directions provided with the child restraint.

Reflection on seat-belt usage and child restraints:

- Ask: How do you feel about teaching seat-belt usage and child restraint content to your community?
- Address concerns and answer questions.

Safe in my vehicle

□ Safe in my vehicle chart and cards tool

1. Ask participants to get into groups of three or four.
2. Hand out **Topic 2 tool: Safe in my vehicle** to each group (chart and cards). Give each group scissors and sticky tape/glue.
3. Explain that participants should cut out the photos and use tape/glue to attach the pictures in the appropriate column (correct or incorrect way of using a seat-belt or child restraint).
4. Give the participants 10 minutes to complete this task.
5. Ask each group to go over their choices and correct any mistake they have made in choosing the correct or incorrect way of using a seat-belt or child restraint.
6. At the end of the allocated time, ask different groups to share their responses. Groups should make corrections where necessary. When completed, ask participants to hang the completed chart on a wall or other available surface.

Wrap-up

1. Review the learning objectives on the chart paper and ask participants if they feel they have achieved each one.
2. Ask for any further questions or concerns. Revisit any areas where doubts are raised.

Topic 3

Speeding

Overview

The speed at which one is driving increases the risk of a road crash and serious injury or death. This topic explores how speed is a factor that worsens the impact of crashes, identifies vulnerable road users and links speed with other road factors.

Learning objectives

- At the end of this session, volunteers should be able to:
- Define “speeding”
- Describe the effect of speed on crash and injury
- Describe how speeding increases the risk of a crash
- Identify road users that are most vulnerable to speeding vehicles
- Teach speeding content to their community

Tools

- Stopping distance
- Stopping distance scenarios

Preparation

- Write the learning objectives for the topic on chart paper and post at the front of the room.
- Prepare copies of the topic and tools from the volunteer guide for each trainee.
- Other supplies: flipchart paper and markers.

Suggested outline of activities

Depending on the number of volunteers and amount of discussion, this topic will take approximately one hour, 20 minutes to complete.

Activity	Time
Introduction	20 minutes
Speed increases the risk of a crash and serious injury or death	20 minutes
Reflection	5 minutes
Vulnerable road users	15 minutes
Reflection	5 minutes
Linking speed with other risk factors	10 minutes
Wrap-up	5 minutes
Total Time	80 minutes

Introduction

1. Welcome volunteers to the session.
2. Introduce and explain the learning objectives for the topic.
3. Explain that speeding should be the concern of the entire community even those who do not drive. Explain that speeding increases the risk of having a road crash.
4. Hand out Topic 3 of the volunteer guide: Speeding. Allow approximately two minutes for the volunteers to become familiar with the topic.
5. Instruct volunteers to form groups of three or four people. In their groups, volunteers should read Topic 3: Speeding to themselves or as a group, whichever way they feel more comfortable.
 - After the group has completed reading, they should discuss the reflection questions within the topic and be prepared to share their responses with the larger group.
 - Allow approximately 10 minutes for reading and discussion.
6. After 10 minutes, hold a quick plenary for general understanding. Monitor responses for evidence of learning.

Speed increases the risk of a crash and serious injury or death

□ Stopping distance tool

1. Review the definition of speeding as driving at an excessive speed (driving above the legal speed limit) or at an inappropriate speed (driving too fast for the conditions, but within the legal speed limit).
2. Ask participants: What road conditions should a driver consider when driving? When should a driver consider driving below the speed limit? Chart responses and post chart at the front of the room.
3. Hand out Topic 3 tool: Stopping distance. Using the tool, review the typical stopping distances provided.
4. Explain that there is a difference between recognizing or noticing a need to brake and then actually applying the brake.
5. Explain the effect of speeding on the safety of a vehicle's occupants.
6. Ask participants to get into pairs to discuss the following questions: Why do you think people in your community speed? Who do you think speeds? Who does not speed, and why? What can you do to stop speeding in your community?
7. After 10 minutes, ask participants to come back to a plenary session. Ask them to share responses. Chart responses and place the chart at the front of the room.

Reflection on speeding:

- Ask: How do you feel about teaching speeding content to your community?
- Address concerns and answer questions.

Vulnerable road users

1. Explain who are vulnerable road users including pedestrians, motorcyclists and cyclists.
2. Ask participants: Why do you think these road users are more vulnerable than people in vehicles? Allow for participants to give responses to the whole group.
3. Ask participants to get into groups of three or four. Provide chart paper and markers to each group.
4. Ask participants to discuss ways they can raise awareness in their communities about vulnerable road users.
5. After 10 minutes, ask participants to come back to a plenary session. Ask each group to share their responses. Charts should be placed up on the wall.

Reflection on vulnerable road users:

- Ask: How do you feel about teaching vulnerable road users content to your

community?

- Address concerns and answer questions.

Linking speed with other risk factors

1. Remind participants that speeding has an impact on injury and the need for seat-belts and child restraints.
2. Explain why helmets can protect from serious brain injuries.
3. Review how time and distance have an impact on stopping time. Refer to [Topic 3 tool: Stopping distance](#).
4. Ask participants to get into groups of four or five. Hand out [Topic 3 tool: Stopping distance scenarios](#).
5. Give each group a scenario of road behaviour (there are three scenarios in total). Explain that the groups should determine whether the vehicle in their scenario will stop before hitting the pedestrian.
6. After five minutes, ask groups to share out their findings. The scenario should be read aloud before the findings are shared.
7. Following their responses, you might wish to comment as follows:

Scenario 1: Although the car would be able to stop in time, do participants think this would be a close call? Remind them that it is not just about reaction time, as this would only be the case if the driver sees the child and dog, which is not guaranteed in every situation.

Scenario 2: It seems unlikely that the car would stop in time, even though theoretically it could. With wet roads and an older car, the tyres might not grip the road surface so well.

Scenario 3: Again it seems probable that the car would not stop in time. The driver is tired and so his reaction time is likely to be slower. Also the motorway is busy which means that braking hard might cause other accidents.

Wrap-up

1. Review the learning objectives on the chart and ask the participants if they feel they have achieved each one.
2. Ask for any further questions or concerns. Revisit any areas where doubts are raised.

Topic 4

Helmets

Overview

The use of a helmet when riding on a motorcycle or a bicycle can decrease the risk of serious brain injury. This topic identifies the structure of the head and brain, explores the use of helmets and describes types of protective helmets.

Learning objectives

At the end of this session, volunteers should be able to:

- Identify how the head and brain can get injured during a crash on a motorcycle or bicycle
- Identify the level of protection that each type of helmet can offer
- Identify the correct way of wearing a helmet
- Teach helmet use content to their community

Tools

- ❑ Head and brain structure
- ❑ Helmet components
- ❑ Types of helmets

Preparation

- Write the learning objectives for the topic on flipchart paper and post at the front of the room.
- Prepare copies of the topic and tools from the volunteer guide for each trainee.

Suggested outline of activities

Depending on the number of volunteers and amount of discussion, this topic will take approximately one hour, 15 minutes to complete.

Activity	Time
Introduction	20 minutes
Helmets against injuries	20 minutes
Reflection	5 minutes
How do helmets work	20 minutes
Reflection	5 minutes
Wrap-up	5 minutes
Total Time	75 minutes

Introduction

1. Welcome volunteers to the session.
2. Introduce and explain the learning objectives for the topic.
3. Explain that using a helmet when on a motorcycle or bicycle can help reduce the risk of serious brain, neck and facial injury.
4. Hand out [Topic 4 of the volunteer guide: Helmets](#).
 - Explain that volunteers will be taught how to use three tools during the session and that they will be expected to practise and demonstrate their skill in delivering the tools.
 - Allow approximately two minutes for the volunteers to become familiar with the topic.
5. Instruct volunteers to form groups of three or four people. In their groups, they should read [Topic 4: Helmets](#) to themselves or as a group, whichever way they feel more comfortable.
 - After the group has completed reading, they should discuss the reflection questions in the topic and be prepared to share their responses with the larger group.
 - Allow approximately 10 minutes for reading and discussion.
6. After 10 minutes, hold a quick plenary for general understanding. Monitor responses for evidence of learning.

Helmets against injuries

□ Topic 4 Tool: Head and brain structure

1. Explain that the use of a helmet by motorcyclists and cyclists can help prevent brain injury and associated consequences.
2. Using **Topic 4 tool: Head and brain structure** explain the head and brain structure.
3. Explain what happens during a road crash. Say that when the head stops moving the brain continues to move forward and hits the inside of the skull, then rebounds and hits the opposite side of the skull. Remind participants that the use of the helmet is to cushion this movement of the brain.
4. Ask participants to get into pairs to practise explaining the head and brain structure. Each partner should take a turn. After five to seven minutes, ask participants to come back to a plenary session.

Reflection on head and brain structure:

- Ask: How do you feel about teaching head and brain structure to your community?
- Address concerns and answer questions.

How do helmets work?

□ Topic 4 tool: Helmet components and Topic 4 tool: Types of helmets

1. Explain that in order to help protect the head and brain from a serious injury, motorcycle riders must wear a properly fastened good quality helmet.
2. Hand out **Topic 4 tool: Helmet components** and **Topic 4 tool: Types of helmets**.
3. Using **Topic 4 Tool: Helmet components** explain the components, including the shell, the liner, the comfort padding, and the retention system/chin strap. Remind participants that all helmet components work together to provide protection to the head and brain.
4. Using **Topic 4 tool: Types of helmets** explain the five types of helmets pointing out the differences between the helmets.
5. Ask participants to get into pairs to practise explaining helmet components and types of helmets. Each partner should take a turn. After five to seven minutes, ask participants to come back to a plenary session.

Reflection on helmet components and types of helmets:

- Ask: How do you feel about teaching helmet components and types of helmets to your community?
- Address concerns and answer questions.

Wrap-up

1. Review the learning objectives on the chart and ask the participants if they feel they have achieved each one.
2. Ask for any further questions or concerns. Revisit any areas where doubts are raised.

Topic 5

Drinking, drugs and driving

Overview

Due to the effect of alcohol on bodily functions, drink-drivers have a significantly higher risk of being involved in a road crash than drivers who have not consumed alcohol. Drivers using recreational drugs with or without alcohol put themselves, their passengers and pedestrians at greater risk. This topic explains the dangers of drinking or taking drugs and driving and ways to get home safely after taking either.

Learning objectives

At the end of this session, volunteers should be able to:

- Identify the legal blood alcohol content (BAC) limit in their country
- Identify the alternative actions to driving they can take to keep themselves and others safe from a crash
- Teach drinking, drugs and driving content to their community

Tools

- ❑ 'How much is too much?' tool
- ❑ Drug driving tool

Preparation

- Write the learning objectives for the topic on chart paper and post at the front of the room.
- Download a copy of your country's BAC limit from the country profiles in the World Health Organization's Global Status Report on Road Safety 2018.

https://www.who.int/violence_injury_prevention/road_safety_status/2018/en/

Prepare a copy for each participant to project on the wall or a paper copy.

- Prepare copies of the topic and tool from the volunteer guide.
- Other supplies: flipchart paper, markers

Suggested outline of activities

Depending on the number of volunteers and amount of discussion, this topic will take approximately one hour 50 minutes to complete.

Activity	Time
Introduction	20 minutes
Alcohol contributes to road crashes	15 minutes
Effects of alcohol on your body and its performance	25 minutes
Reflection	5 minutes
Avoiding a drink-driving related crash	10 minutes
Drugged driving	20 minutes
What steps can people take to avoid drugged driving?	10 minutes
Wrap-up	5 minutes
Total Time	110 minutes

Introduction

1. Welcome volunteers to the session.
2. Introduce and explain the learning objectives for the topic.
3. Explain that alcohol has important cultural, religious and symbolic meanings in most countries. However, alcohol is also a drug with many toxic effects. The number of deaths due to alcohol is about 25 times the number of deaths attributed to all other illegal drugs combined.
4. Hand out **Topic 5 from the volunteer guide: Drinking, drugs and driving**. Allow approximately two minutes for the volunteers to become familiar with the topic.
5. Instruct volunteers to form groups of three or four people. In their groups,

they should read **Topic 5: Drinking, drugs and driving** to themselves or as a group, whichever way they feel more comfortable.

- After the group has completed reading, they should discuss the reflection questions in the topic and be prepared to share their responses with the larger group.
 - Allow approximately 10 minutes for reading and discussion.
6. After 10 minutes, hold a quick plenary for general understanding. Monitor responses for evidence of learning.

Alcohol contributes to road crashes

1. Remind participants that you have already stated that alcohol has important cultural, religious and symbolic meanings in most countries. Ask participants to call out ideas about how alcohol is used as cultural, religious or symbolic tools in your home community? Record responses on flipchart paper.
2. Explain that alcohol consumption can result in impairment which increases the likelihood of the driver being in a vehicle crash. Describe how alcohol impairs driving including increased reaction time, lower vigilance, decreased visual sharpness as well as impacts on decisions to wear a seat-belt, use a helmet and speed.

Effects of alcohol on your body and its performance

1. Define and explain the concept of Blood Alcohol Concentration (BAC).
2. Ask participants to find Table 1 in the topic: Effect of alcohol on body and performance according to increasing BAC levels.
3. Review each factor that affects the level of alcohol absorption in blood. Remind participants that these factors are hard to assess so the safest action is not to drive a car or ride a motorcycle after drinking alcohol.
4. Ask participants to get into pairs to practise explaining the factors that affect the level of alcohol in the blood. Each partner should take a turn. After 10 minutes, ask participants to come back to a plenary session.
5. Now give each participant a copy of the How much is too much tool. Have them work in pairs delivering the content of the tool and answering questions that may arise.

Reflection on drinking and driving content:

- Ask: How do you feel about teaching drinking and driving content to your community?
- Address concerns and answer questions.

Avoiding a drink-driving related crash

1. Explain the best ways to avoid a drink-driving related crash include using a taxi or public transportation. Emphasize that the safest course of action is not to consume alcohol at all.
2. Explain that limiting consumption to the limits set by your government is another way to avoid drink-driving related crashes. Refer them to look at the section How is alcohol in the body measured? in the topic. Hand out the country profile page from the World Health Organization's Global Status Report on Road Safety 2018, and ask them to look for the BAC limit. They should be telling community members that it is very important to obey the drink-driving laws in their country, as lives can be saved if they keep strictly within the limit.

Drugged driving

❏ Drug driving tool

1. Remind participants that using (mostly illegal) drugs recreationally, that is, in order to feel good or "high", is also very dangerous when driving. Also, misusing any drugs that your medical provider prescribes can be dangerous, even if you think that more of them would make you feel better. The set dose should never be exceeded. Different drugs have different effects, from slowing reaction times to making the person taking them become more aggressive.
2. Ask participants if drug-taking is a common problem in their community, particularly among young people. Remind them that peer pressure can be hard to resist for young people, and that a culture of drug-taking can be a difficult one to avoid. Hand out the tool Drug use and driving and review with them the points made.
3. Ask them, with a partner, to practise using the tool to explain to a community audience of young people what the effects of using drugs on driving might be. Give them 10 minutes to practise.

Reflection on taking drugs and driving:

- Ask: how do you feel about teaching taking drugs and driving content to your community?
- Address any questions or concerns.

What steps can people take to prevent drugged driving?

1. Remind them of the steps to take to avoid drink-driving. The steps are the

same for driving when taking drugs.

2. Ask them to call out what these steps are. Can they add any to the suggestions in the topic content?
3. Remind them that they should be teaching their community members that the safest option when driving is to drink no alcohol and to take no drugs. They should always remain within the legal limit for alcohol, and they should know that in most countries, recreational drugs are illegal as well as dangerous.

Wrap-up

1. Review the learning objectives on the chart and ask participants if they feel they have achieved each one.
2. Ask for any further questions or concerns. Revisit any areas where doubts are raised.

Topic 6

Distractions

Overview

Road crashes are often caused by distractions to the driver or pedestrian. This topic explores types of driver distractions and how to reduce road crashes due to distractions.

Learning objectives

- At the end of this session, volunteers should be able to:
- Identify the different types of distraction that can happen while driving
- List the effects of a distraction on driving behaviour
- Identify safe behaviour against mobile phone use while driving
- Teach distraction content to their community

Tools

- ❑ Topic 6 tool: Types of driver distraction
- ❑ Topic 6 tool: Distraction game

Preparation

- Write the learning objectives for the topic on chart paper and post at the front of the room.
- Prepare copies of the topic and tools for each trainee from the volunteer guide.
- Other supplies: metre sticks

Suggested outline of activities

Depending on the number of volunteers and amount of discussion, this topic will take approximately one hour, 20 minutes to complete.

Activity	Time
Introduction	20 minutes
What is a driving distraction?	20 minutes
Reflection	5 minutes
Sources of driver distraction	5 minutes
Mobile phone usage	20 minutes
Reflection	5 minutes
Wrap-up	5 minutes
Total Time	80 minutes

Introduction

1. Welcome volunteers to the session.
2. Introduce and explain the learning objectives for the topic.
3. Explain that drivers can be distracted and that these distractions can cause road crashes.
4. Hand out [Topic 6 from the volunteer guide: Distractions](#).
 - Explain that volunteers will be taught how to use two tools during the session and that they will be expected to practise and demonstrate their skill in delivering the tools.
 - Allow approximately two minutes for the volunteers to become familiar with the topic.
5. Instruct volunteers to form groups of three or four people. In their groups, volunteers should read [Topic 6: Distractions](#) to themselves or as a group, whichever way they feel more comfortable.
 - After the group has completed reading, they should discuss the reflection questions in the topic and be prepared to share their responses with the larger group.
 - Allow approximately 10 minutes for reading and discussion.
6. After 10 minutes, hold a quick plenary for general understanding. Monitor responses for evidence of learning.

What is a driving distraction?

□ Topic 6 tool: Types of driver distraction

1. Explain that a driving distraction is a diversion of attention away from critical safe driving activities.
2. As a whole group, ask participants to brainstorm ideas about what types of distractions might interfere with driving. Record responses on chart paper and post at the front of the room.
3. Using Topic 6 Tool: Types of driver distraction explain the four types of distractions: visual, cognitive, physical, and auditory. Remind participants that sometimes more than one of these types of distractions may occur at the same time.
4. Ask participants to get into pairs to practise explaining types of driver distractions. Each partner should take a turn. After five to seven minutes, ask participants to come back to a plenary session.

Reflection on distractions content:

- Ask: How do you feel about teaching distractions content to your community?
- Address concerns and answer questions.

Sources of driver distraction

1. Explain that sources of driver distraction may be external or internal. Provide some examples; you may use examples from the prior brainstorming activity.
2. Remind participants that the danger of distraction on road safety depends on the effect of the source of distraction on driving behaviour as well as the frequency and duration of the distraction.

Mobile phone use

1. Explain that mobile phone use greatly contributes to road crashes. This is of great concern as mobile phone use is on the rise. Explain that mobile phone use while driving causes all four types of driver distraction. Also explain that texting while driving has similar effects.
2. As a whole group, ask participants to brainstorm the results/effects of using a mobile phone while driving. Ask: how does using a mobile phone distract a driver and impair driving behaviour? Record responses on chart paper and post at the front of the room.
3. If not already mentioned, explain the following effects of mobile phone usage while driving:
 - Longer reaction time to detect and respond to an unexpected event or hazard.

- Difficulty maintaining correct lane position.
 - Slower reaction and brake time, and braking may be more intense with a shorter stopping distance.
 - Driving at a slower or at an inappropriate speed.
 - Slower reaction to traffic signals or may not see them at all.
 - Reduces the field of view as the driver is more likely to look straight ahead and not at the sides or in mirrors.
 - Following vehicles at shorter distances.
 - Increases driver stress and frustration because of the additional mental workload
 - Reduces the driver's awareness of what is happening around them
4. Split the participants into pairs and give each pair a metre stick. Explain that they are now going to play the distraction game.
 5. Participant A will sit, resting their arm on a table with their hand protruding, ready to catch the metre stick. Participant B will stand slightly in front of participant A with the bottom of the metre ruler just above Student A's hand. Without warning, participant B will let go of the metre stick and participant A should try to grab it as quickly as possible. Participant A should keep their hand in the correct position and try to catch the ruler as it falls.
 6. The pair should record how long it takes participant A to grab the metre stick. They can try it several times. After doing it for a few times, participant A will have distractions added, like using the phone, talking to participant B, etc. Participant B should continue dropping the stick for a few times while the distractions are happening. The pair should record the measurement participant A is getting and compare it to the measurements they recorded without any distractions.
 7. The whole game should take about 10 or 15 minutes.

Reflection on driver distraction:

- Ask: How does playing the distraction game help you teach this content to your community? Did you find that adding distractions added to the reaction time of the person grabbing the stick? How could you use this game, or something similar, with community groups?
- Address concerns and answer questions.

Wrap-up

1. Review the learning objectives on the flipchart and ask the participants if they feel they have achieved each one.
2. Ask for any further questions or concerns. Revisit any areas where doubts are raised.

Topic 7

Pulling it all together

Overview

This topic includes two games that allow learners to put road safety knowledge to work and incorporate a behaviour change lens.

Learning objectives

At the end of this session, volunteers should be able to:

- Apply knowledge about road safety and behaviour change to learn and to play two games
- Teach road safety games to their community

Tools

- ❑ Topic 7 Tool: Road safety game
- ❑ Topic 7 Tool: Behaviour change in road safety game

Preparation

- Write the learning objectives for the topic on chart paper and post at the front of the room.
- Write five stages of behaviour change with brief definitions on chart paper and post at the front of the room.
- Prepare copies of the Road safety game, including making up the pawns (one for each participant), the die and the board (one for every four participants). Make copies of the sets of game cards for each group and copy the money cards (sufficient for about 50 Red Bucks (RB) for each participant).
- Copy the Behaviour change in road safety game board (one for every four

participants). Copy the sets of behaviour change cards (one set for each group). Mix them well in a pack.

- Other supplies: scissors, sticky tape/glue.

Suggested outline of activities

Depending on the number of volunteers and amount of discussion, this topic will take approximately one hour 35 minutes to complete.

Activity	Time
Introduction	5 minutes
Road safety game	30 minutes
Reflection	10 minutes
Behaviour change in road safety game	30 minutes
Reflection	10 minutes
Final Wrap-up	10 minutes
Total Time	95 minutes

Introduction

1. Welcome volunteers to the session.
2. Introduce and explain the learning objectives for the topic.
3. Explain that this session includes playing two games. The first game asks players to use what they have learnt about road safety and what they understand about the consequences of risky driver behaviours. The second game asks players to incorporate knowledge about road safety while considering the five stages of behaviour change. Remind volunteers that they need to think about the behaviour change stages when teaching road safety content in their community.

Road safety game

1. Explain that the **Road safety game** will bring together knowledge learnt from the six topics on road safety and asks the players to consider the consequences of driver behaviours including the use of seat-belts and child re-

straints, speeding, helmets, drinking, taking drugs and driving and driver distractions.

2. Ask participants to get into groups of three or four. Hand out the **Road safety game** to each group. They should have the game board, pawns, die, money, IOUs and a set of cards. Ask them to divide the money equally between them. They will need about 50 RB each.
3. Explain how to play the game. Each player should choose one of the pawns and place it in the Start box. The set of cards should be placed face down by the side of the board. Starting with the youngest, each player takes it in turns to throw the die and to move as many spaces as on the fall of the die. There they should pick up a card and read it out loud. Each card contains a particular road safety scenario and instructions to move your pawn forwards or backwards, to miss turns, and to pay out money. The person with the card must follow the instructions and try to move along the board. If you have to pay out, the RB should be paid to your neighbour on your left. If you have to move backwards, do not go further than the Start box. If you run out of RB, then you must take IOU cards. Whenever you receive any money, then you must pay your debts. The winner is the first to reach the Finish box with their pawn still “alive” and without any debt.
4. Ask participants to start and to complete the game. This should take about 20—25 minutes but allow time for all groups to finish. Walk around to see that they are playing the game according to the instructions.

Reflection on road safety game:

- Ask: What did you learn from playing the road safety game?
- Ask: How do you feel about playing this game with your community members?
- Say: Although this is not a game of skill or knowledge, but simply luck (or otherwise), do you think community members could learn road safety behaviour from the game?
- Address concerns and answer questions.

Behaviour change in road safety game

1. Explain that the **Behaviour change in road safety game** asks game players to use the information learnt from the six topics on road safety and apply their knowledge of the stages of behaviour change.
2. Review the five stages of behaviour change. Provide examples/ask for examples for each stage. Refer to chart paper you prepared and posted in the front of the room.
3. Ask participants to get into groups of three or four. Hand out **Behaviour change in road safety game** to each group. Give each group scissors and sticky tape/glue.
4. Explain the various pages within the game including the game board and the cards. Explain that the goal of the game is to correctly place each card on the stages of behaviour change game board.

5. Read a card from the game and state where you would place it on the game board. Explain why you placed the slip in that category. Refer back to the behaviour change chart as you explain your reasoning. (If necessary, repeat this step with another card and explain your reasoning.)
6. Read another card and ask participants where they would place the card on the board. Ask participants to explain their reasoning. (If necessary, repeat this step with another card.)
7. Ask participants to complete the game by cutting and pasting the 40 cards. This should take about 20 minutes but allow time for all groups to finish.
8. When each group finishes give them a copy of the answer sheet (the pages from the toolkit). Ask them to self-check their group work.
9. When all groups have finished, ask them which cards they may have placed incorrectly and discuss each to clarify in which stage the card should have been placed. Continue discussion which may include some of the following questions:
 - What were the general clues to know if someone was in the knowledge stage?
 - What were the general clues to know that someone was in the approval stage?
 - What were the general clues to know that someone was in the intention stage?
 - What were the general clues to know that someone was in the practice stage?
 - What were the general clues to know that someone was in the advocacy stage?
 - How is knowing the stages important to changing your behaviour?
 - How is knowing the stages important to supporting community members undergoing behaviour change?

Reflection on Behaviour change in road safety game:

- Ask: What did you learn about road safety from playing this game?
- Ask: How do you feel about teaching this game to your community?
- Address concerns and answer questions.

Final wrap-up

1. Review the learning objectives on the posted chart paper and ask participants if they feel they have achieved each one.
2. Ask if they feel comfortable and confident to teach about road safety to community members. Ask if there are any lingering concerns or questions about prior road safety sessions. Revisit any areas where doubts or questions are raised

The fundamental principles of the international Red Cross and Red Crescent movement

Humanity The international Red Cross and Red Crescent movement, born of a desire to bring assistance without discrimination to the wounded on the battlefield, endeavours, in its international and national capacity, to prevent and alleviate human suffering wherever it may be found. Its purpose is to protect life and health and to ensure respect for the human being. It promotes mutual understanding, friendship, cooperation and lasting peace amongst all peoples.

Impartiality It makes no discrimination as to nationality, race, religious beliefs, class or political opinions. It endeavours to relieve the suffering of individuals, being guided solely by their needs, and to give priority to the most urgent cases of distress.

Neutrality In order to enjoy the confidence of all, the Movement may not take sides in hostilities or engage at any time in controversies of a political, racial, religious or ideological nature.

Independence The movement is independent. The National Societies, while auxiliaries in the humanitarian services of their governments and subject to the laws of their respective countries, must always maintain their autonomy so that they may be able at all times to act in accordance with the principles of the Movement.

Voluntary service It is a voluntary relief movement not prompted in any manner by desire for gain.

Unity There can be only one Red Cross or Red Crescent Society in any one country. It must be open to all. It must carry on its humanitarian work throughout its territory.

Universality The international Red Cross and Red Crescent movement, in which all societies have equal status and share equal responsibilities and duties in helping each other, is worldwide.
