What your self-assessment score means:

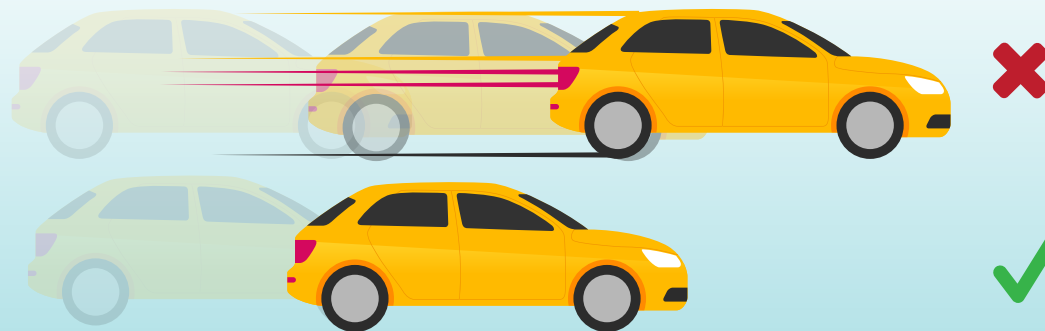

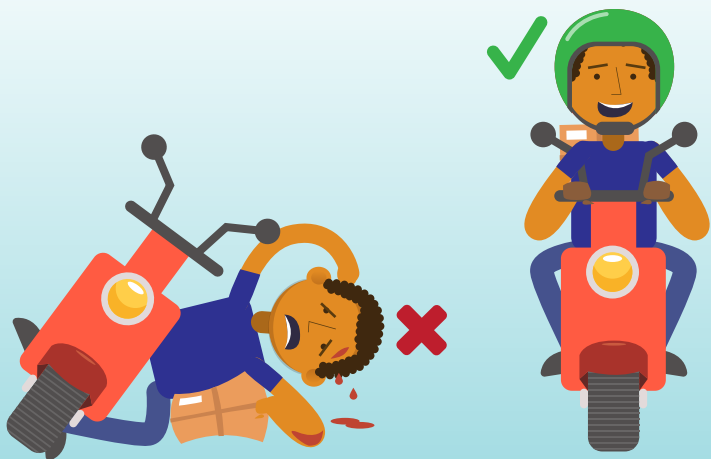

- 6 to 0 points** = You have risky road behaviour and have a **high chance** of getting in a serious crash.
- 1 to 7 points** = You sometimes have some risky behaviours, but your chance of getting in a serious crash is **medium**.
- 8 points** = You have safe road behaviour and you have a **low chance** of getting in a serious crash.

Wearing versus not wearing a seat-belt

Snapshots of the movement of the vehicle occupant when they are not wearing a seat-belt versus when they are wearing a seat-belt.

How to wear a seat-belt

Adults

Pregnant women

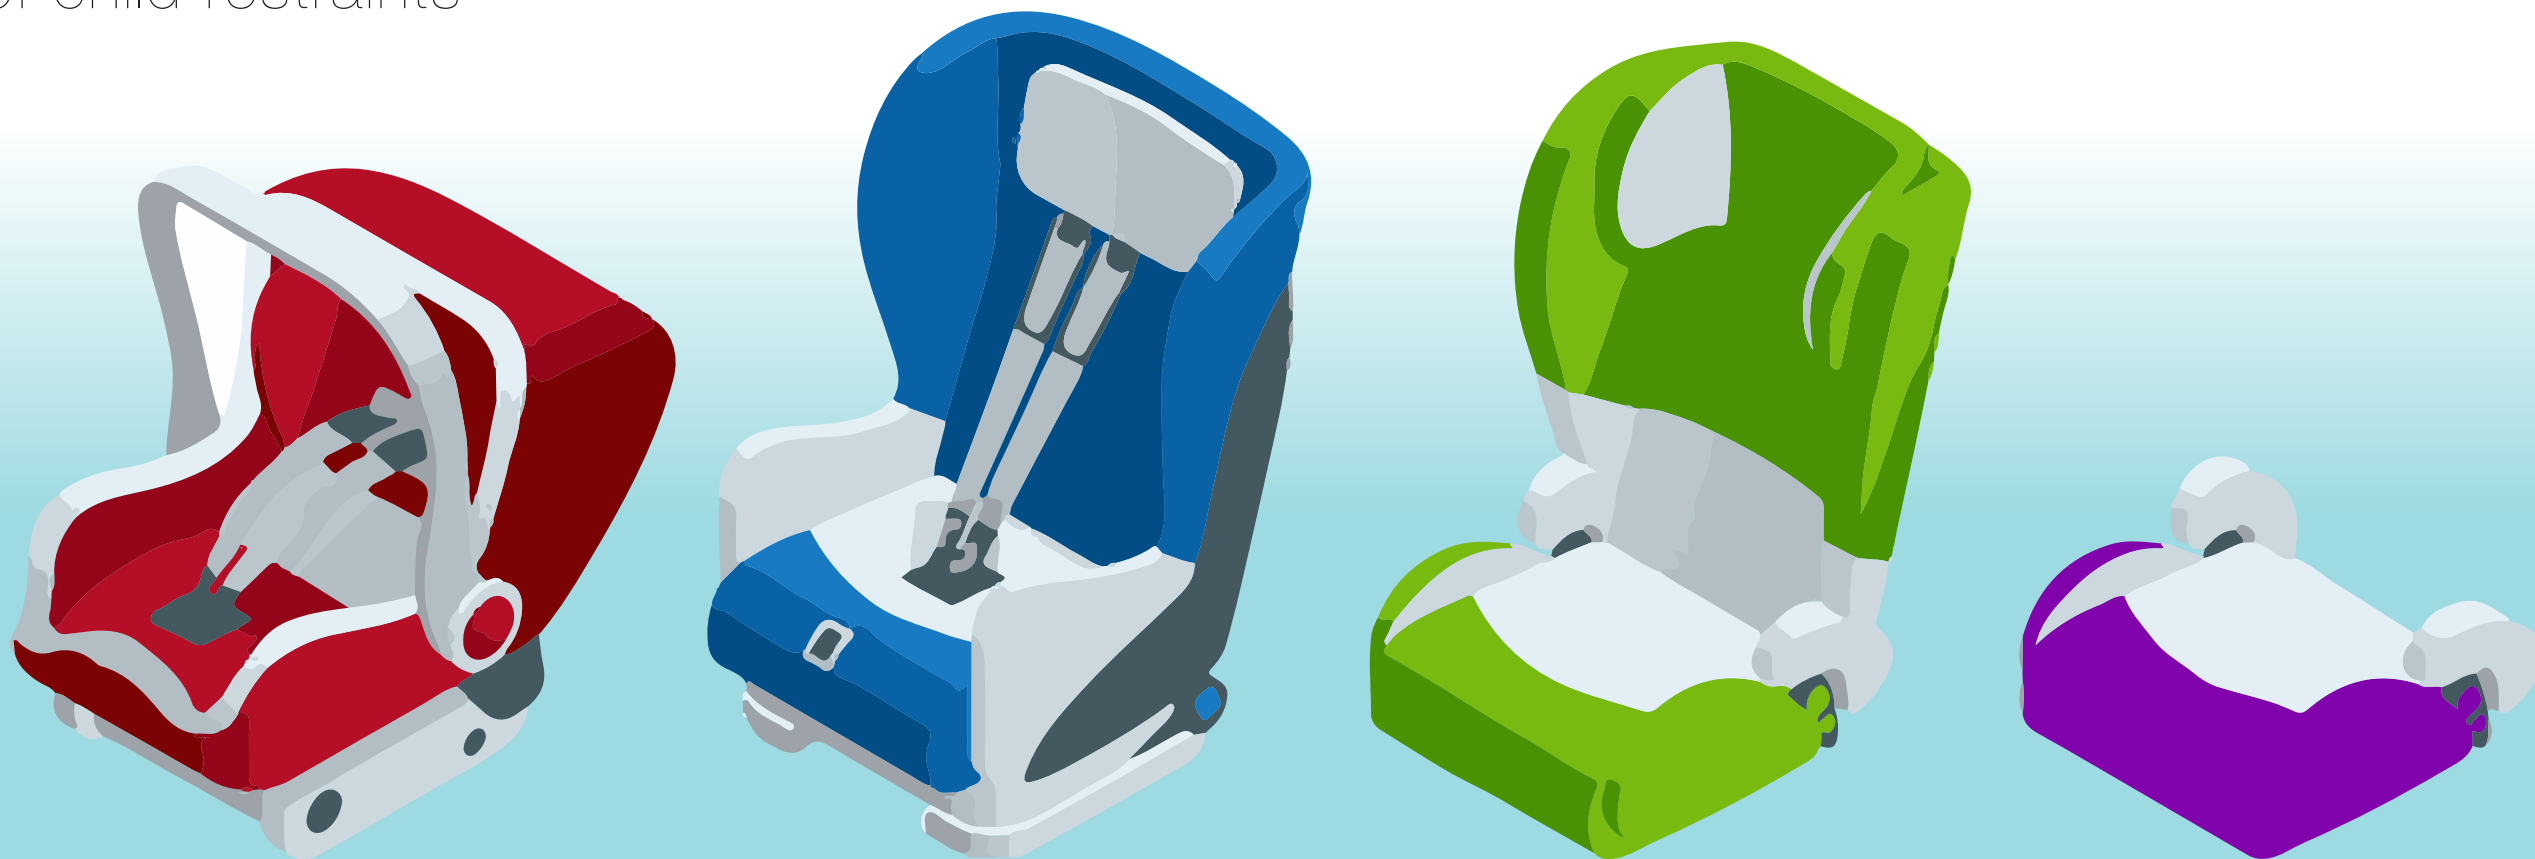

Children

Types of child restraints

Age	<1 year	1-4 years	4-6 years	6-11 years
Weight/ height	<13 kgs	13 – 18 kgs	15 – 25 kgs / ≤ 145 cm	22 – 36 kgs / 145 - 150 cm
Safety features	• Protects the infant's head, rib cage and pelvis, which are very flexible at this age, from different kinds of collisions • Best used rear-facing and in the back seat	• Limits forward head movement in a frontal collision • Distributes the crash force over a wide area • Provides protection against frontal and side collisions, where it prevents the child's body from contacting the car's interior.	• Raises the seating position of the child so that the adult seat-belt lies properly across the chest, crossing diagonally at the child's shoulder rather than the neck, and low across the pelvis. • Due to it having a back, it can protect the child from a side collision.	• Raises the seating position of the child so that the adult seat-belt lies properly across the chest, crossing diagonally at the child's shoulder rather than the neck, and low across the pelvis¹.

Safe in my vehicle chart

After cutting out the 'Safe in my vehicle' cards, place them in either one of the spaces below, according to whether they demonstrate correct or incorrect behaviour.

Correct

Incorrect

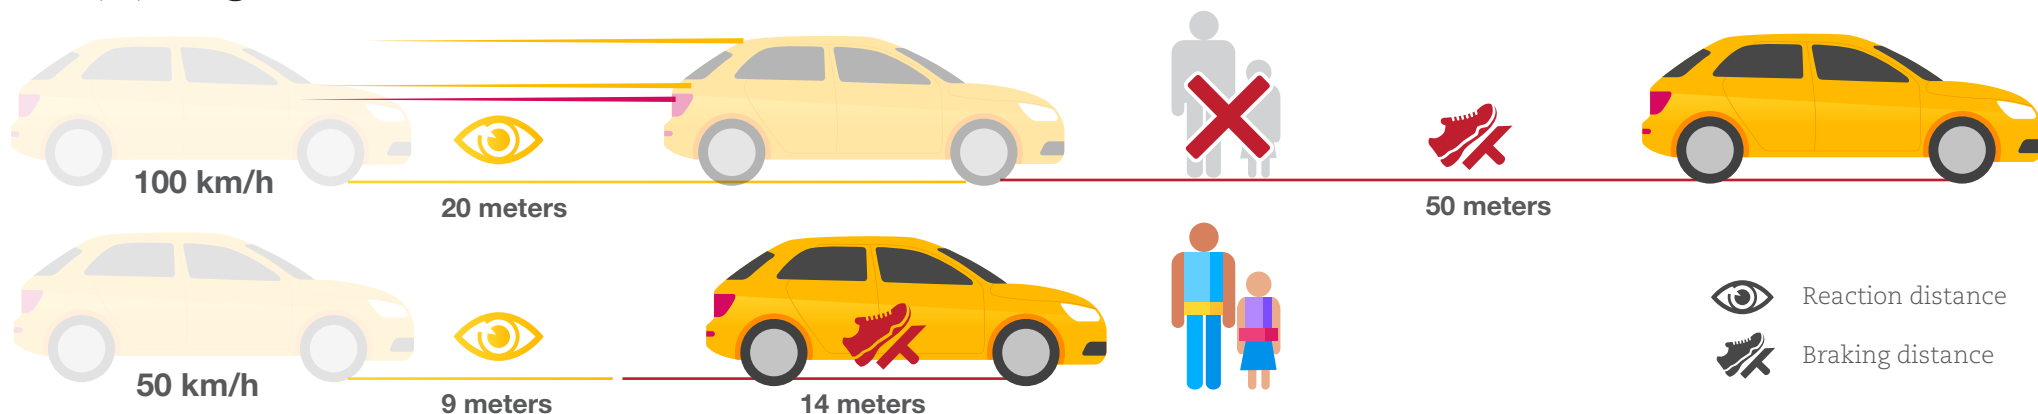

Safe in my vehicle cards

Cut the cards out along the dotted lines.

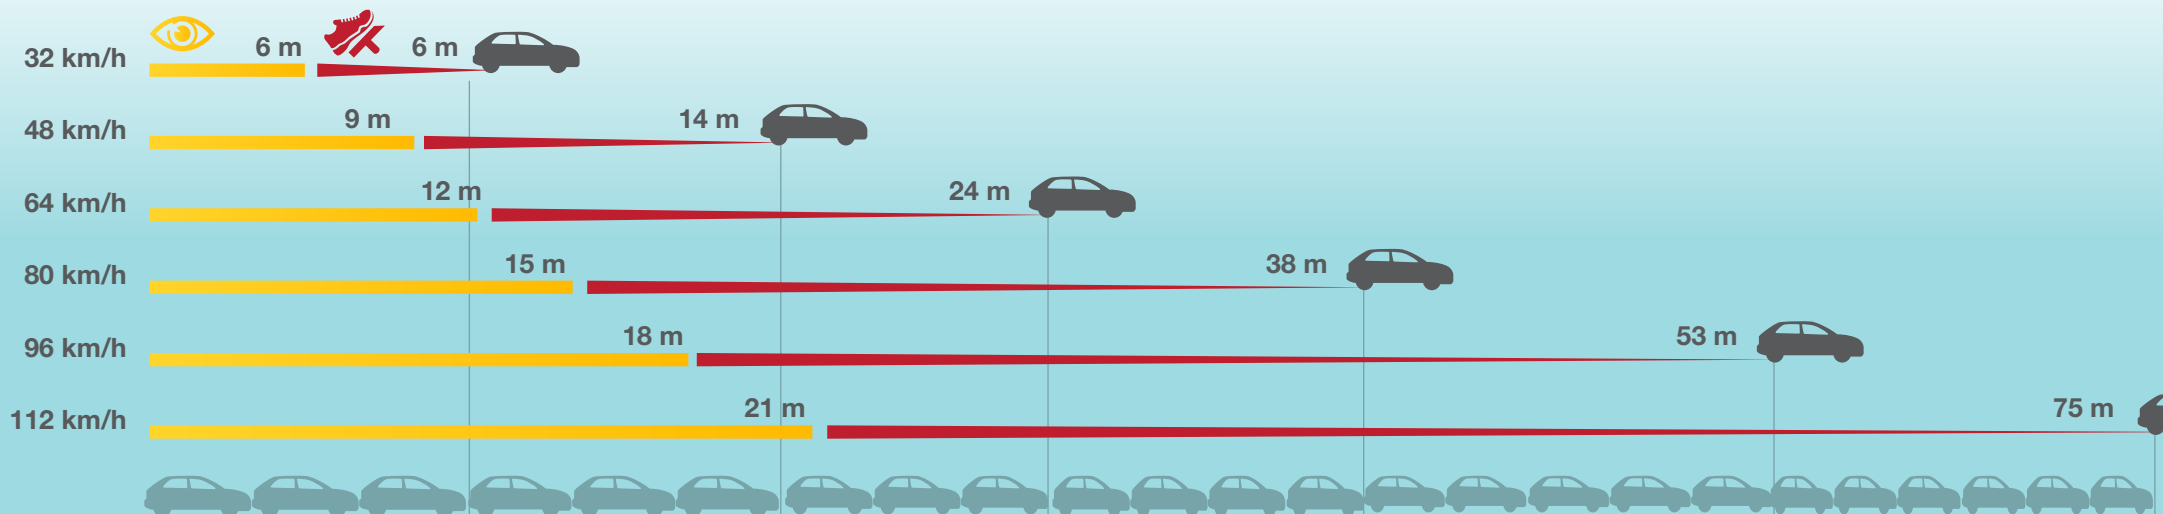

Stopping distance

Typical stopping distances

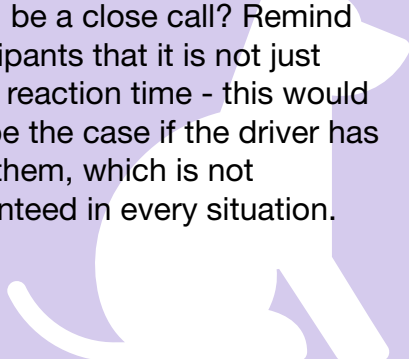

Stopping distance scenarios

Scenario 1

A car is travelling at 48 km/hr. A child walking their dog begins to cross the road 25 meters ahead. Will the car be able to stop in time?

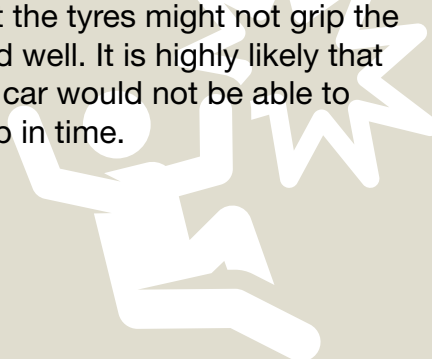

Answer: Under normal circumstances, if a driver sees the child and dog, it would take a car travelling at 48 km/hr 23 meters to stop. In this case, the car would be able to stop in time, but do students think this would be a close call? Remind participants that it is not just about reaction time - this would only be the case if the driver has seen them, which is not guaranteed in every situation.

Scenario 2

It is a rainy day and an older car is travelling at 32 km/hr. A young child and their dad step out into the road 14 meters ahead. Will the car be able to stop in time?

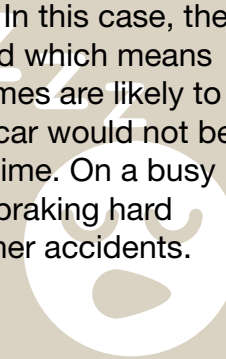

Answer: Under normal circumstances it would take a car travelling at 32 km/hr 12 meters to stop. However, in this case the roads are wet, and the car is older, which may mean that the tyres might not grip the road well. It is highly likely that the car would not be able to stop in time.

Scenario 3

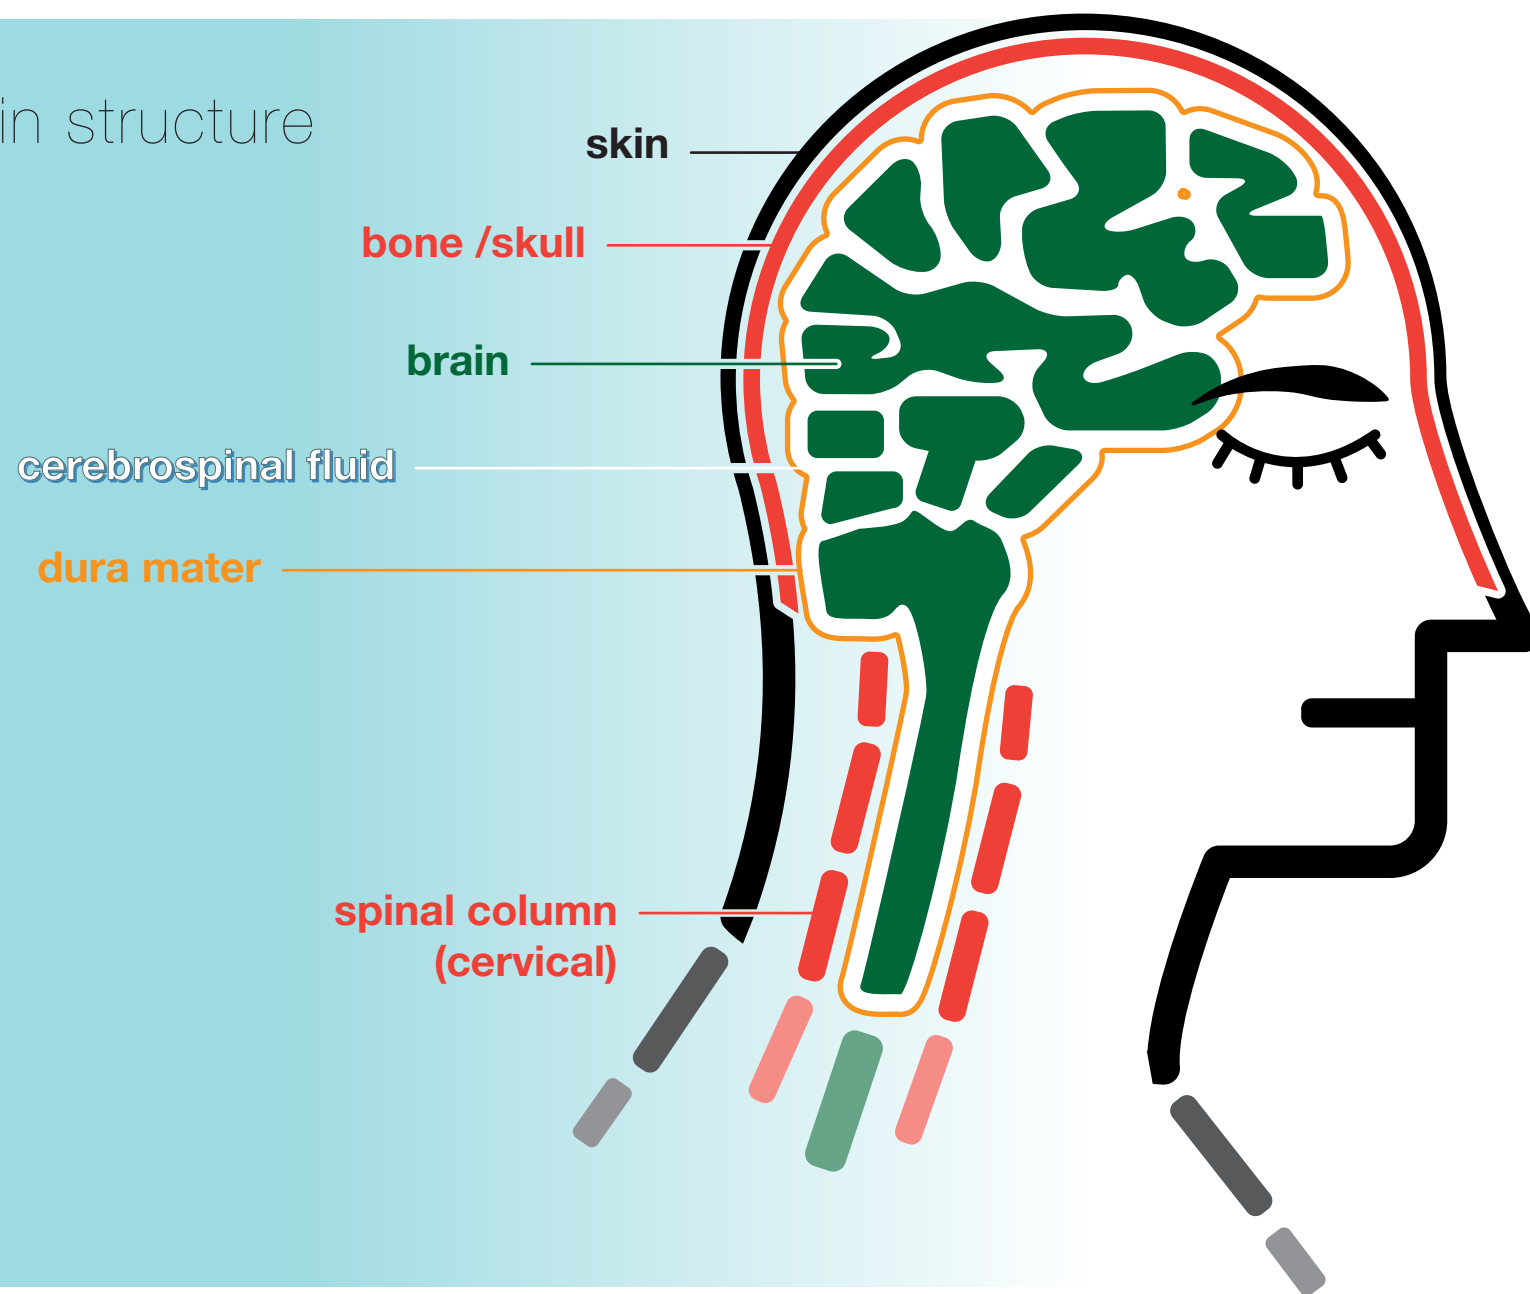

A car is travelling at 80 km/hr on a busy motorway. The driver has had a long journey and is feeling tired. He should have taken a break but on this occasion did not. A young man steps onto the road 53 meters ahead. Will the car be able to stop in time?

Answer: Under normal circumstances it would take a car travelling at 80 km/hr 53 meters to stop. In this case, the driver is fatigued which means their reaction times are likely to be slower. The car would not be able to stop in time. On a busy motorway too, braking hard might cause other accidents.

Head and brain structure

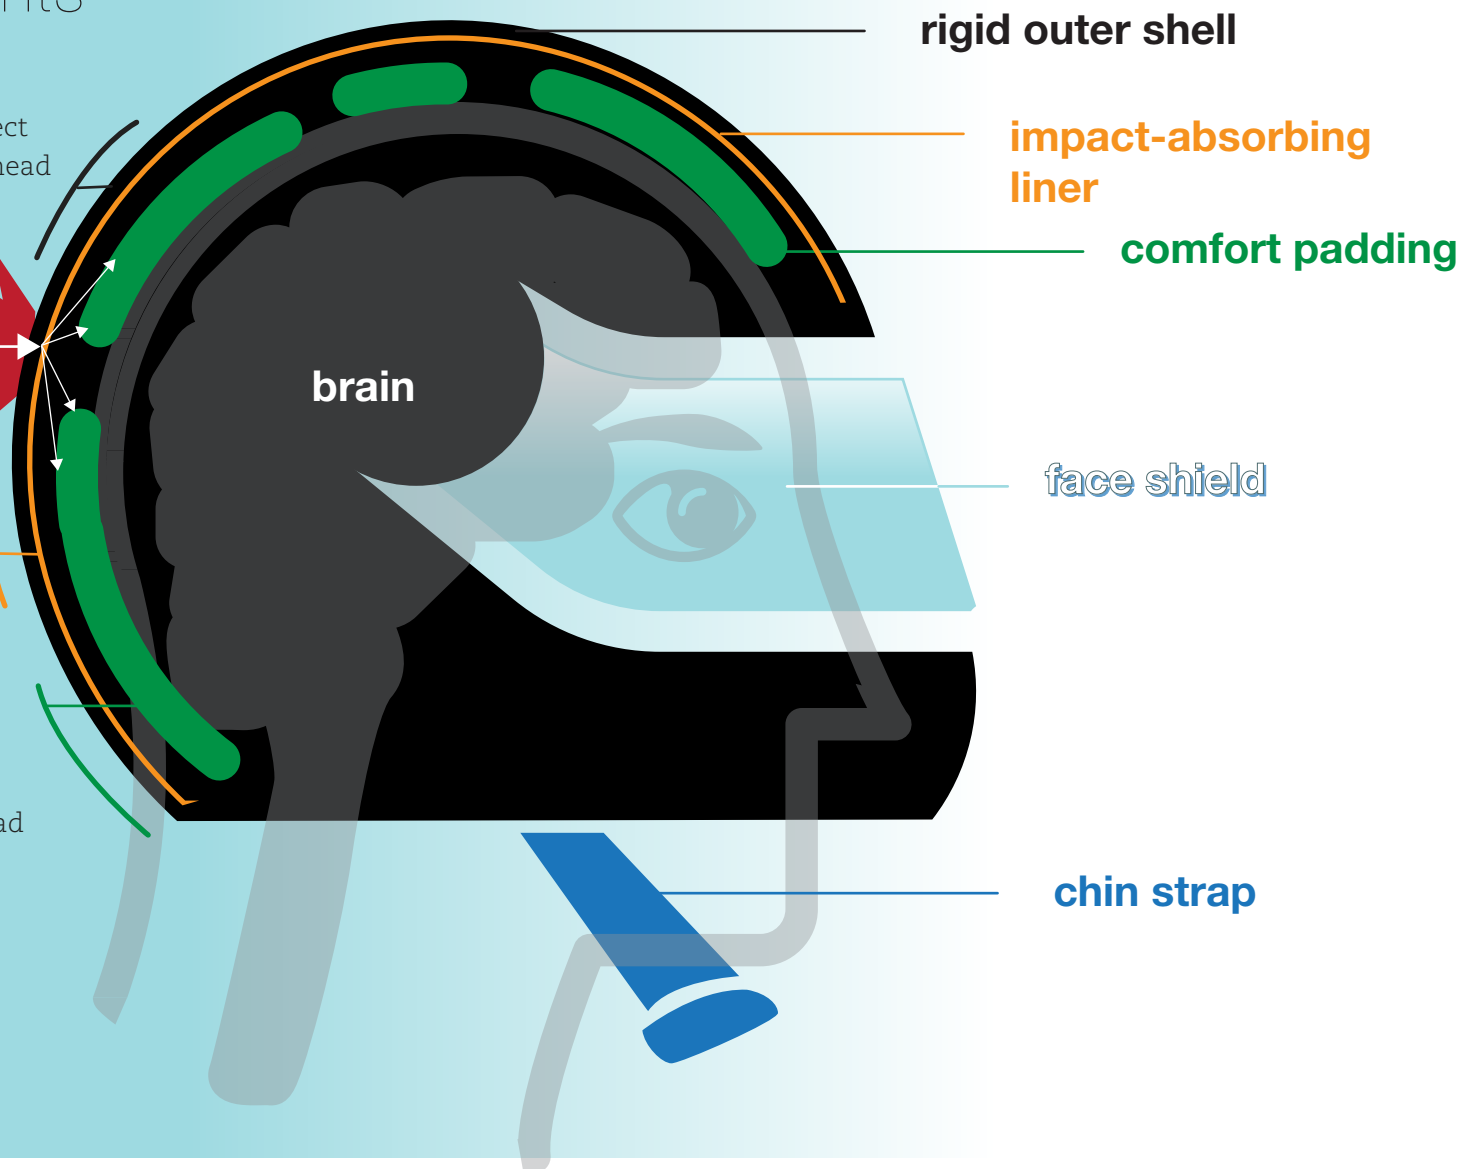

Helmet components

Prevents the head from touching the object because it acts as a barrier between the head and the object with which it is colliding.

IMPACT

Spreads the force of the impact over a greater surface area so that it is not concentrated on specific areas of the skull.

Reduces the force by which the brain hits the skull when the crash occurs. The soft material inside the helmet absorbs some of the impact and therefore the head comes to a halt more slowly.

Types of helmets

Full-face

- Protects the face, skull, chin and jaw
- Protects against impact
- Provides a maximum range of sight vertically and peripherally

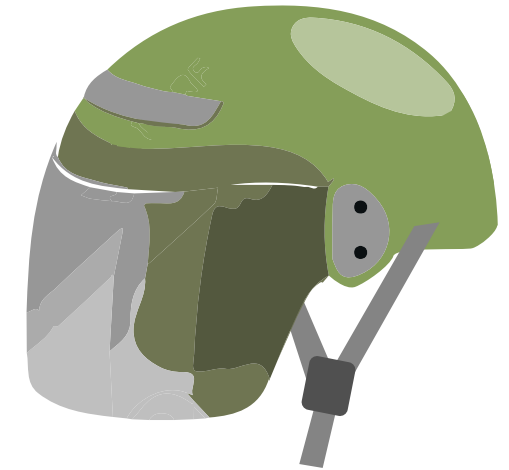

Open-face

- Protects the skull
- Protects against impact
- Limited protection for the chin and jaw
- May or may not have retractable visors to protect the eyes

Half-head

- Protects the skull
- No protection for the chin and jaw
- Rarely equipped with visors
- May or may not have ear flaps connected to the retention system

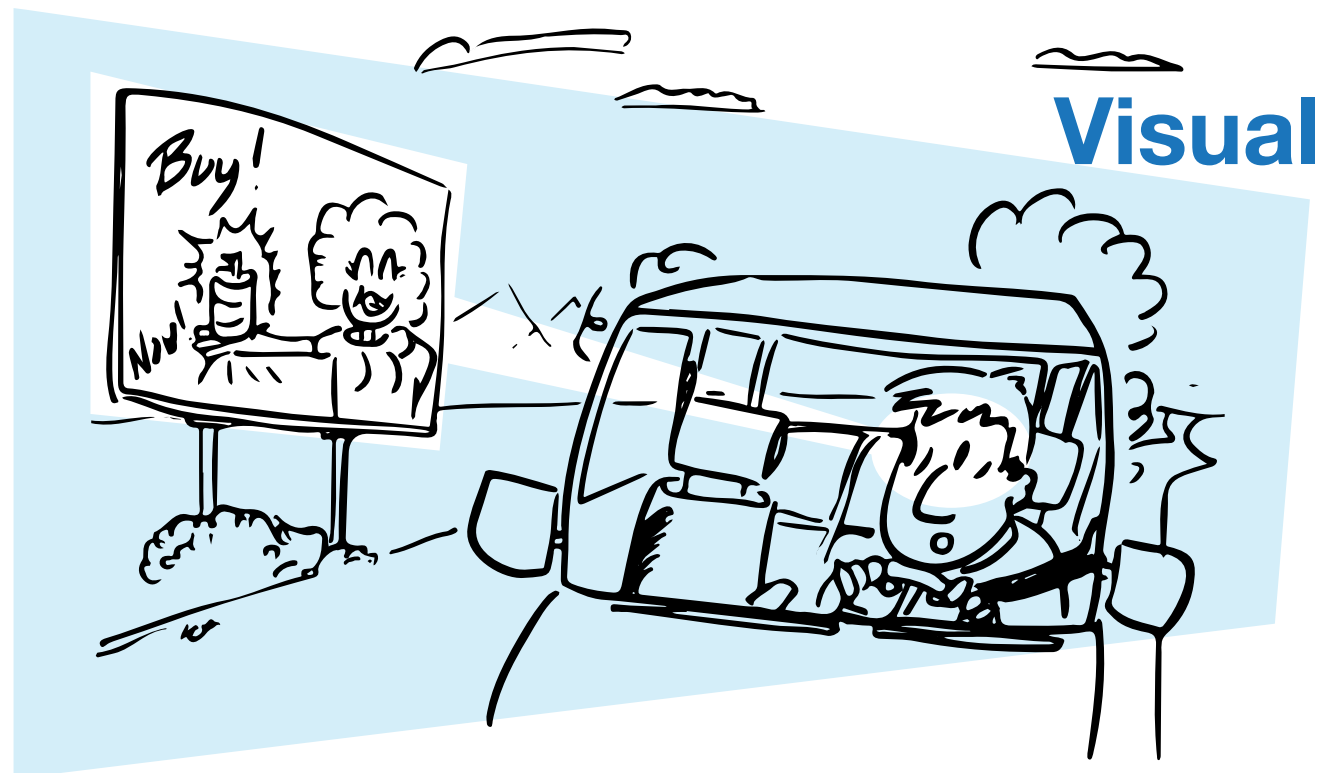

Tropical

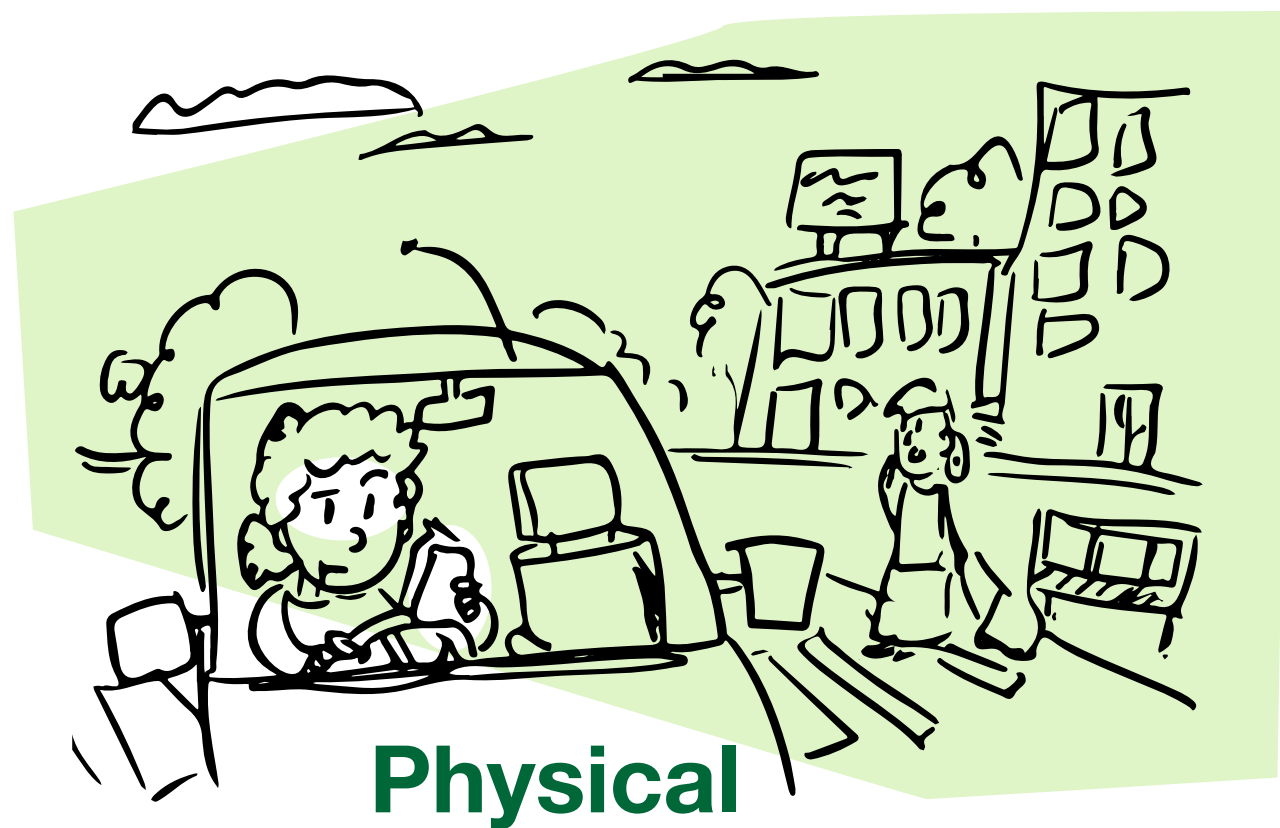

- Designed for very hot and humid areas (e.g. South and South-east Asian countries)
- Has ventilation holes to reduce the heat
- Light in weight

Types of driver distraction

Auditory

Road safety

Game

International Federation
of Red Cross and Red Crescent Societies
www.ifrc.org Saving lives, changing minds.

Road safety game

Goal of the game

The road safety game consists of a game board, pawns, game cards, Red Bucks (one, five and ten), IOUs (one and three) and a game die (which is thrown each turn to tell the player how many spaces they can move). Play with up to four players. The winner is the player whose pawn reaches the Finish and with no IOUs

Setup

Each player chooses a pawn (A). Each player is given approximately 50 Red Bucks (B). Arrange game board on flat surface. Shuffle game cards and place faced down on one side of the game board. Place the IOU cards on the other side of the board.

Each player places their pawn at START.

Each round...

1. The oldest player plays first.
2. Roll the die. The player finds the number on the top of the die and then moves their pawn forward that many spaces on the game board.
3. The player then takes a game card and reads the card to the group. The player completes the directions on the card. Then, the player puts the card face up next to the stack of face-down cards. Card directions can be:
 - **Move forward:** Player should move his pawn forward the number of spaces listed on the card.
 - **Move backward:** Player should move pawn backward the number of spaces listed on the card. Do not go further back than the Start box.
 - **Miss a turn:** Player will lose the number of turns as listed on the card.
 - **Pay Red Bucks:** Player must give the amount of Red Bucks indicated on the card to the player on their left.
 - **IOUs:** If a player does not have Red Bucks to pay then the player can take an IOU for the amount owed. As soon as he or she receives any money, the IOUs must be paid to the neighbour on the left.
 - **You are dead:** this player is out of the game.
4. The person on the left is the next player (unless the miss a turn). Follow the directions in Step 2. Continue to play in this fashion.
5. When no game cards are available, shuffle discard pile and reuse the cards. Place reshuffled stack face down.

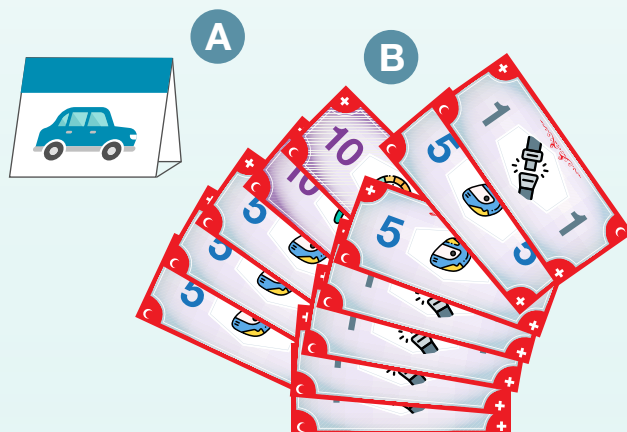

Game end

Game ends when the first player reaches the 'Finish' space and has no IOUs or is the only player who did not end up dead.

Contents

- A) game board (A2 size)*
- B) player pawns (max. 4)*
- C) game die*
- D) game money or "Red Bucks"/"IOUs"
- D) 32 game cards

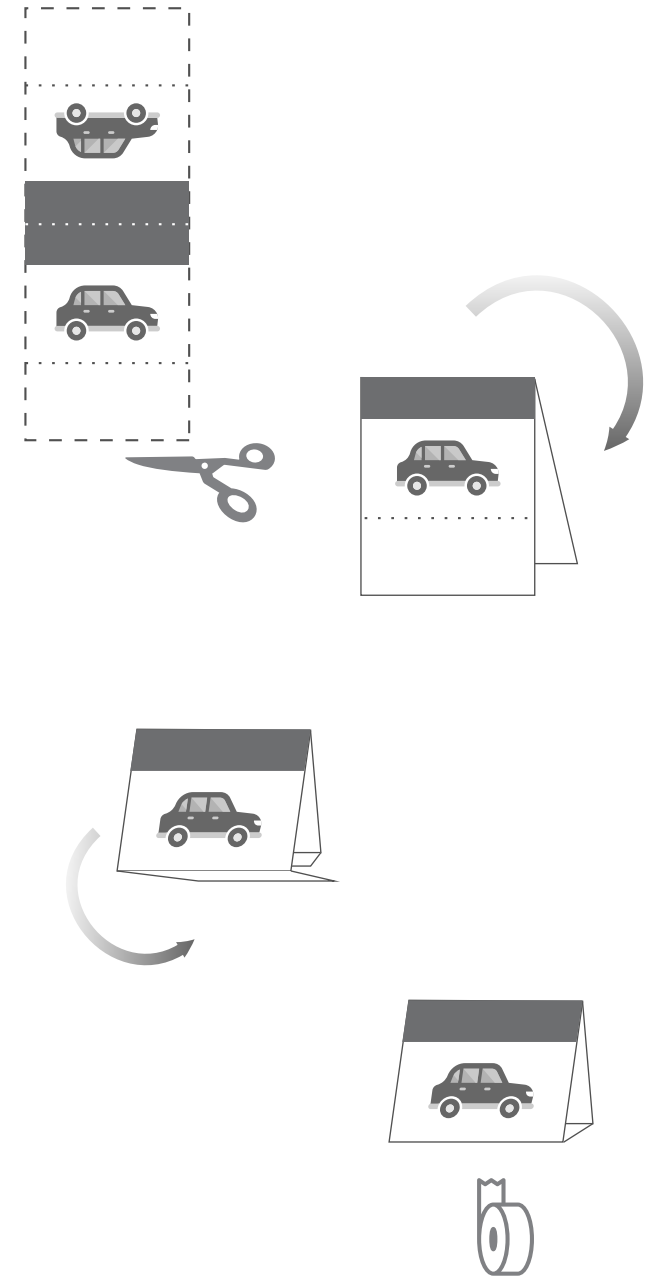

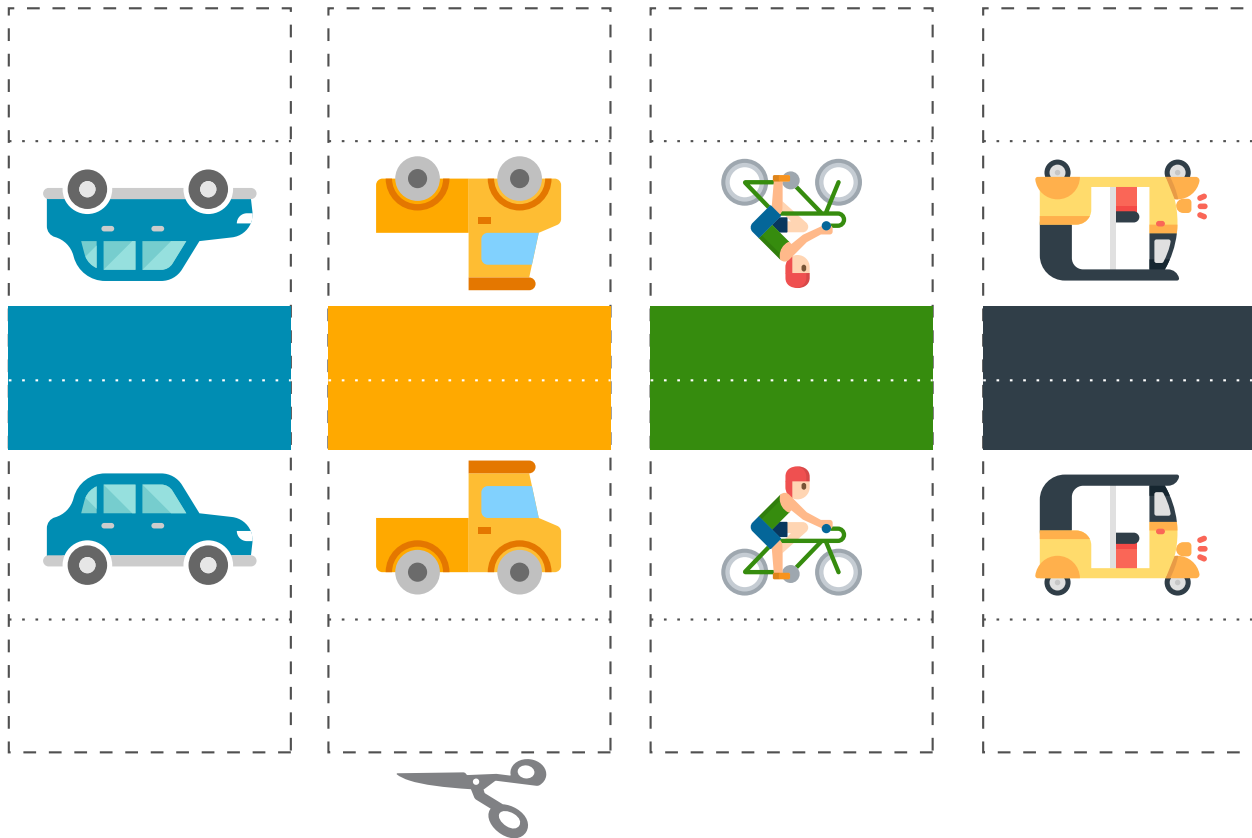

*some assembly required

Player pawns

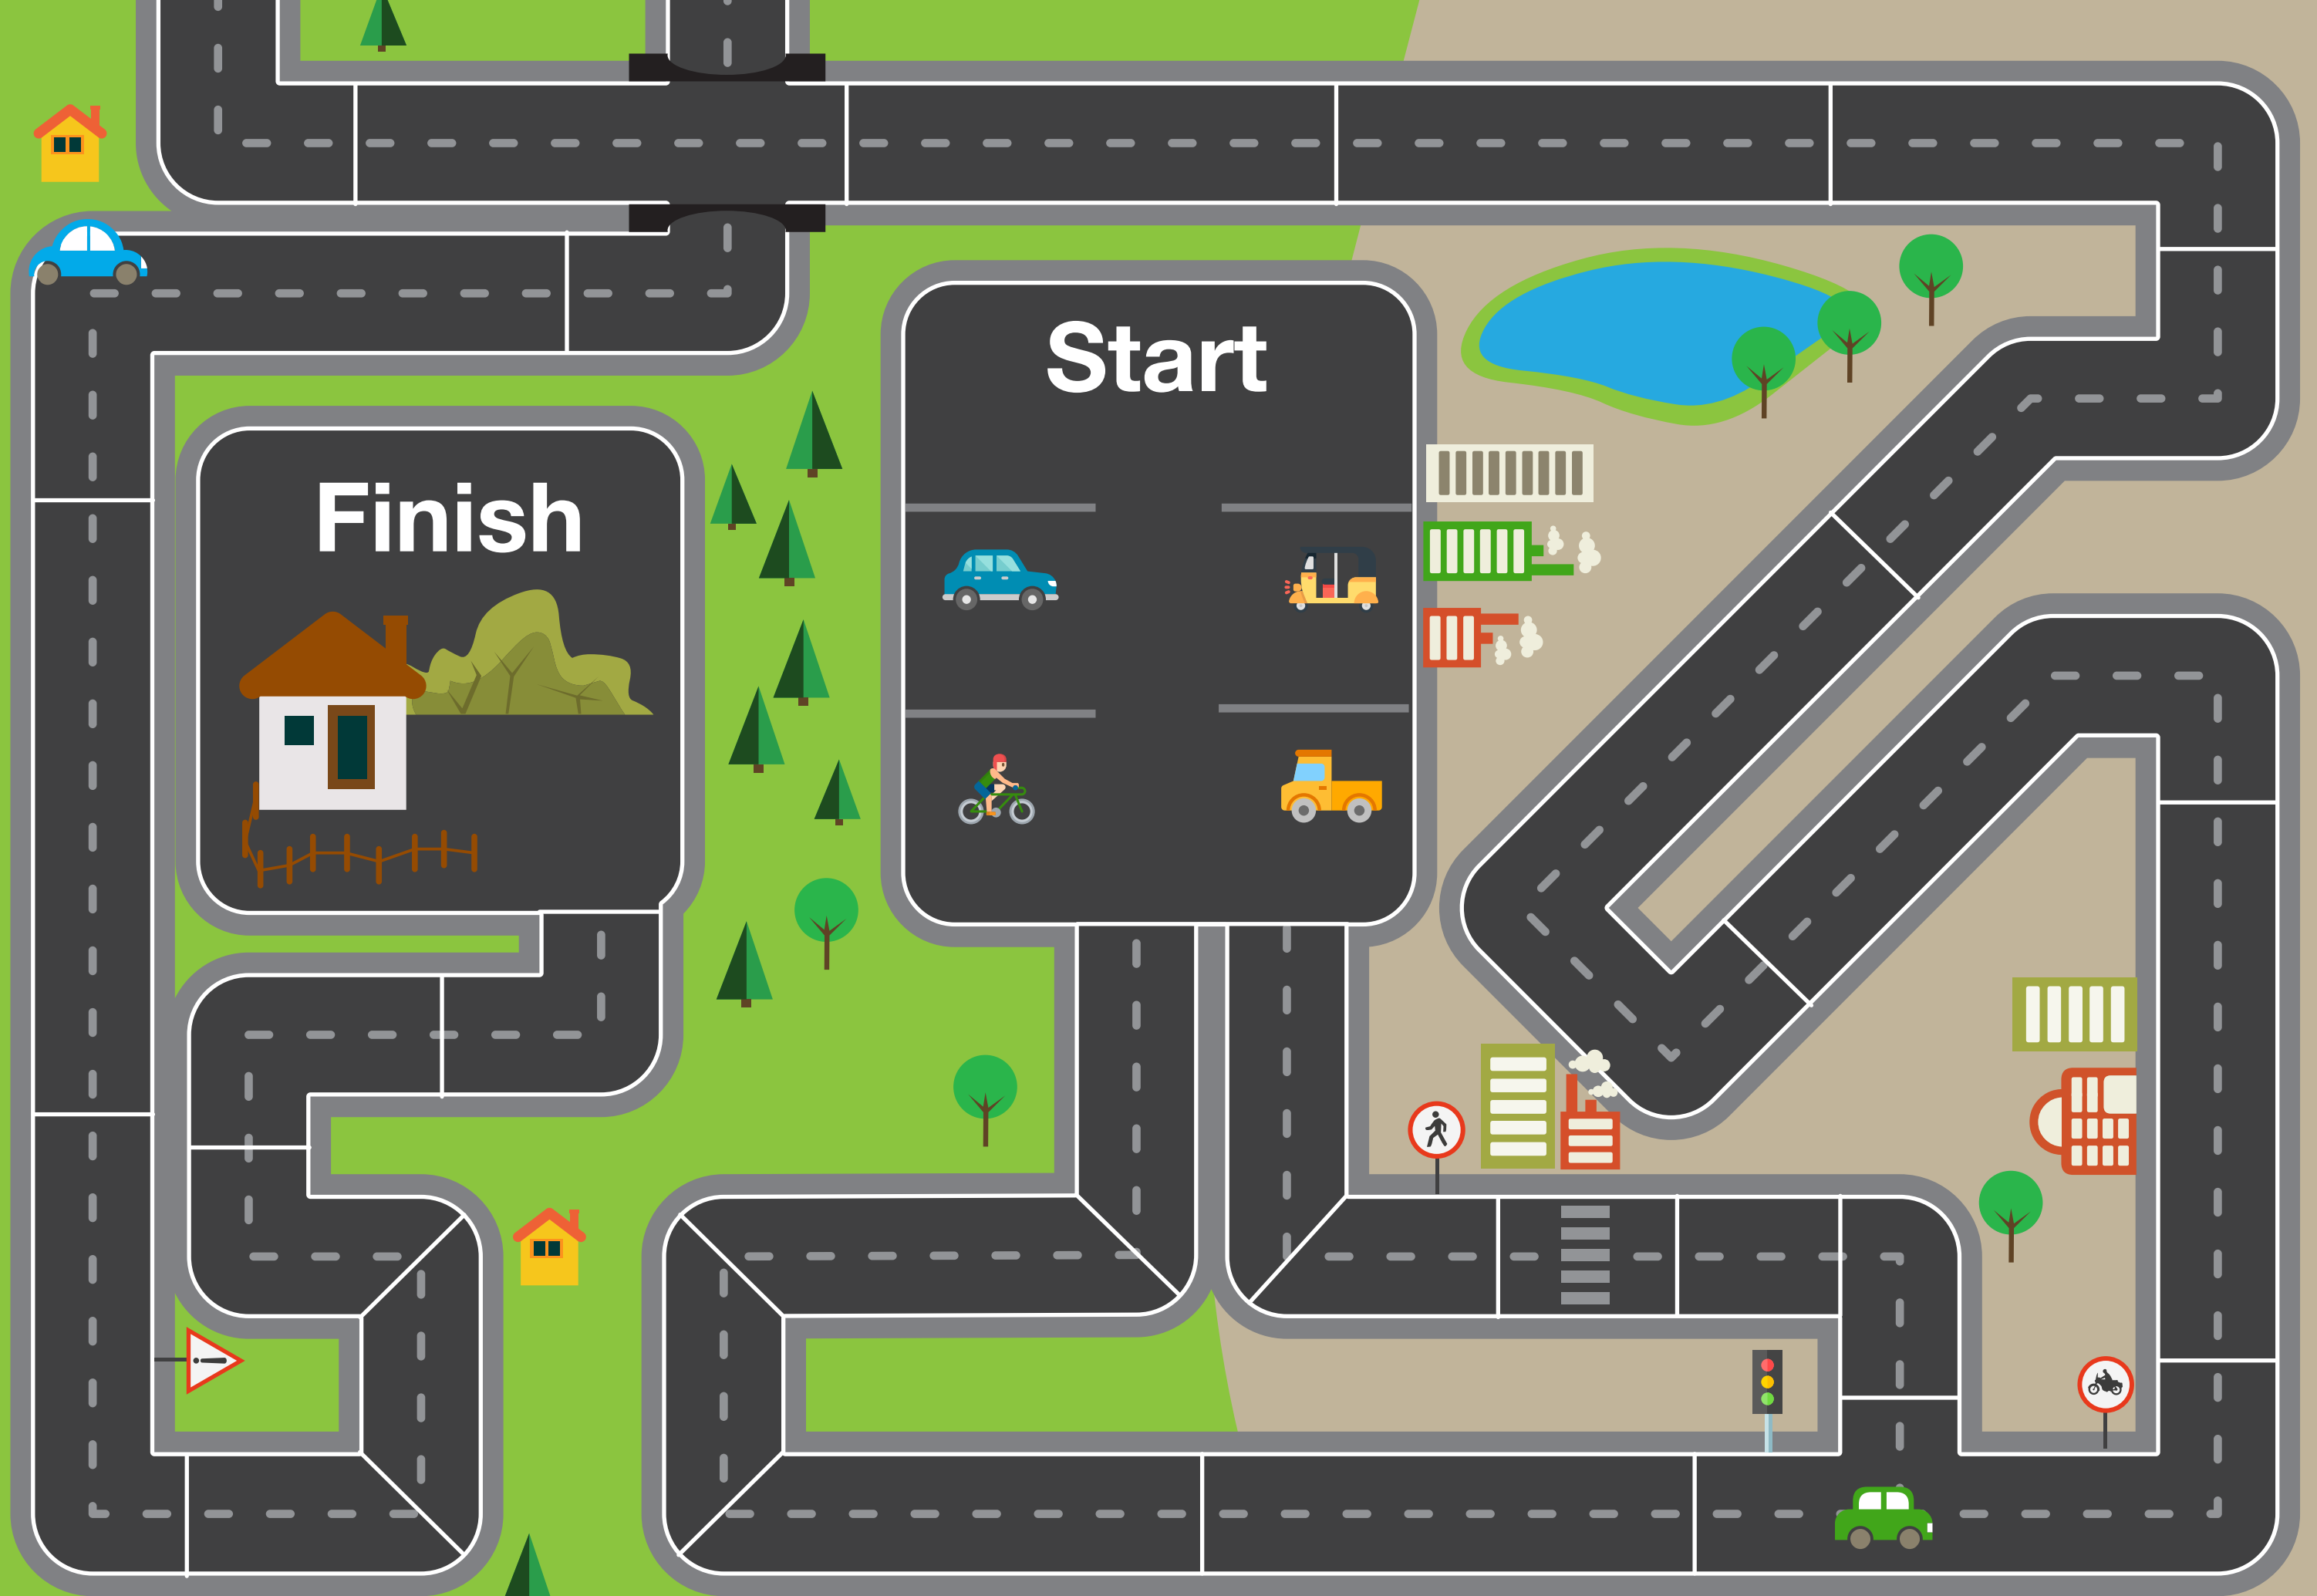

Cut the pawns out along the dotted line. You should have four pawns in total, which you can use to indicate where you are on the game board. Fold the pawns along the dotted lines and use a piece of sticky tape to stick the bottom pieces of each pawn and to form a triangle-shaped pawn.

Road safety game

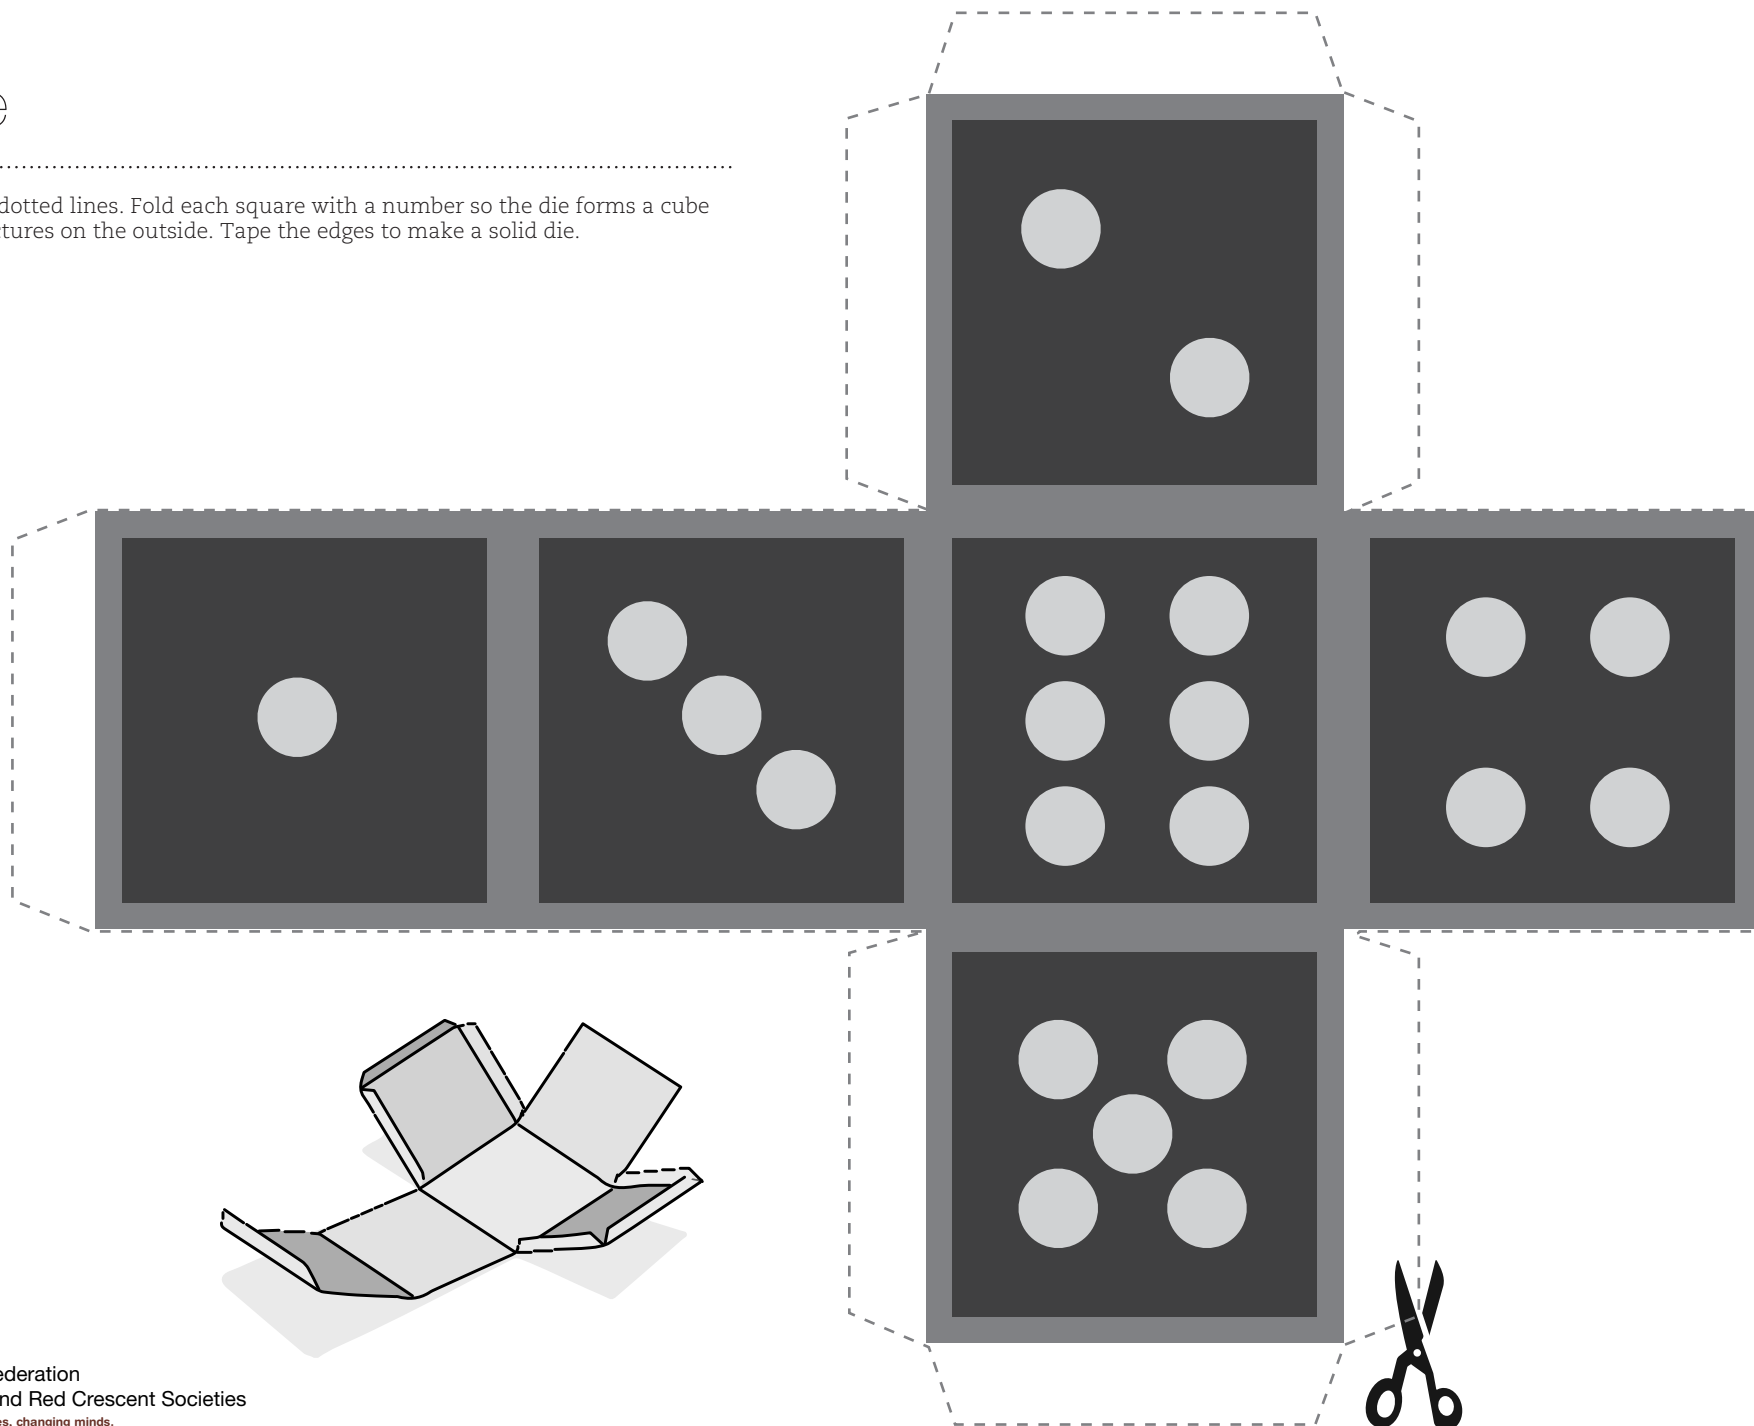

International Federation
of Red Cross and Red Crescent Societies
www.ifrc.org Saving lives, changing minds.

Game die

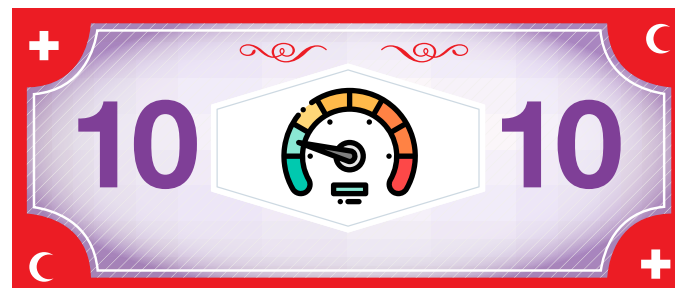

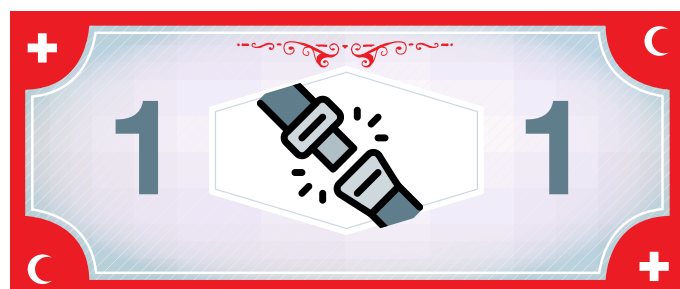

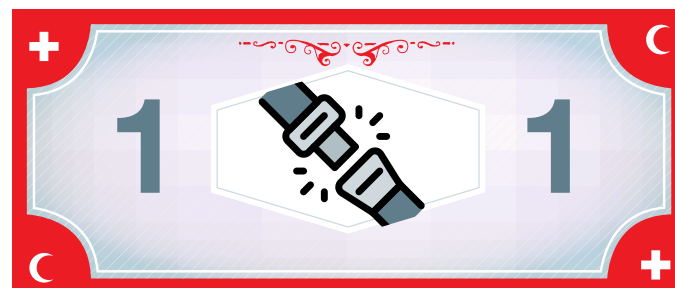

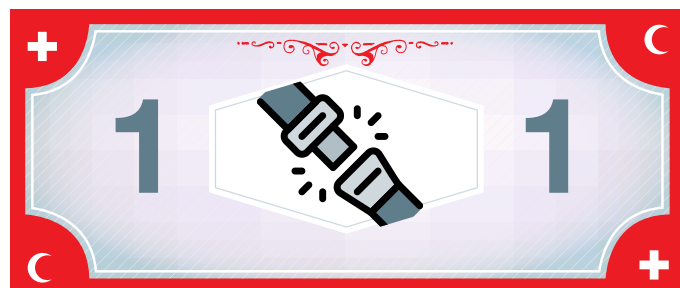

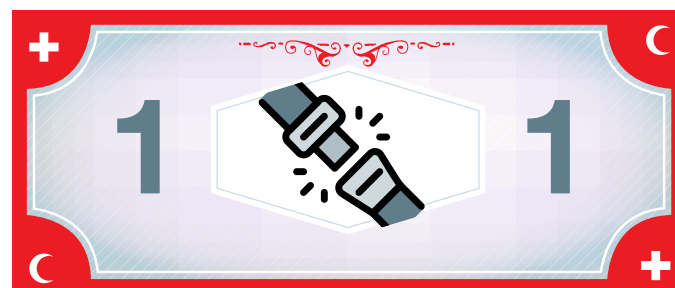

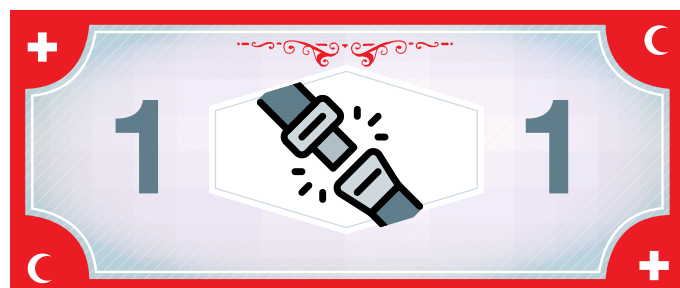

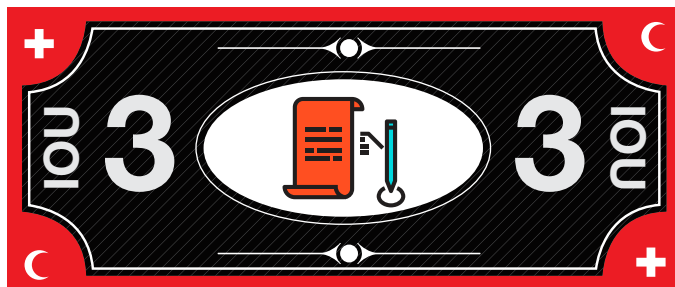

Cut the shape out on the dotted lines. Fold each square with a number so the die forms a cube with the numbers and pictures on the outside. Tape the edges to make a solid die.

Money (Red Bucks)

Copy this sheet as many times as needed and cut the notes of game money out along the dotted lines.

Road safety

Game cards

Print the cards and cut the cards out along the dotted lines.

You forgot your helmet at work but you ride your motorcycle anyway. You put yourself at risk of injury and death.

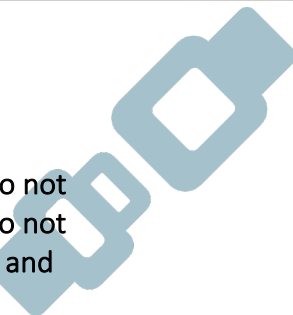

Go back 5 spaces.

You have your helmet but do not want to mess your hair so you place it on the rack and start cycling. You put yourself at risk of injury and death.

Go back 5 spaces.

Your seat-belt is not buckling and you do not know where to get it repaired, so you do not do so. You put yourself at risk of injury and death.

Go back 8 spaces.

Your phone buzzes and you check the text for just two seconds. In that short period of time, a child runs in front of your car. You hit him and end up going to prison.

Pay 10 RB and miss your next 3 turns.

Road safety

Game cards

Print the cards and cut the cards out along the dotted lines.

You are so late! You drove 50 km/h in a school zone – 25 over the speed limit – to get to work. You get a ticket for speeding and have to go to traffic court.

Pay 5 RB and miss your next turn.

Your friend gave you a pill and convinced you it would make you feel great. You only feel dizzy and confused. You get on your scooter to go home but cannot keep your balance. You run into a wall and crash. You break a leg and have to go to the hospital.

Pay 4 RB (medical bills) + 2 RB (bike repairs) + 2 RB (more expensive insurance) and miss your next 2 turns.

You bought an old baby seat with a broken strap on sale! Your baby is in the baby seat when a car hits your car from behind. Your baby is ejected through the windshield. This is going to cost you besides having to miss work while your baby undergoes surgery.

Pay 5 RB (medical bills) + 1 RB (new baby seat) + 2 RB (car repairs) and miss your next turn.

You are coming home from a party. You only had two drinks and you feel fine. An animal runs in front of your car. You swerve to miss it and run into a parked car. The police fine you and you end up spending a night in jail.

Pay 4 RB (car damage) + 2 RB (police fine) and miss your next turn.

Road safety

Game cards

Print the cards and cut the cards out along the dotted lines.

The seat-belt feels uncomfortable so you take it off since you are only driving a short distance. You are very tired. A truck hits your car just as you are about to fall asleep. When you wake up again, you realize that you have been in a coma and your car is a wreck. You must walk everywhere.

Pay 4 RB (medical bills) and miss your next 5 turns.

You are lost on the motorway! While driving at 120 km/h you type the address for your destination into your phone and do not see the curve until it is too late. The resulting crash leaves you and your children badly injured. You lose your job from spending too much time in the hospital with your children and at your daughter's physical therapy sessions.

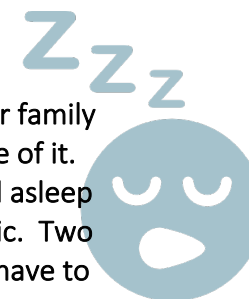

Pay 4 RB (medical bills) + 8 RB (new car) + 2 RB (increased insurance costs) + 2 RB (police fine) + 4 RB (therapy) and miss your next 2 turns.

You just had a baby – congratulations! In the excitement, you forgot to put the baby seat in the car. It is only half a kilometre so you hold your newborn in your arms while your partner drives the short distance. A drunk driver hits your car and your baby flies out of arms and dies from her injuries.

Pay 4 RB (medical bills) + 10 RB (burial costs) and miss your next turn.

You are working three jobs to feed your family and not getting enough sleep because of it. While driving home from a job, you fall asleep and crash your car into oncoming traffic. Two people are killed but you survive. You have to go to court for causing death by dangerous driving. You also lose all three of your jobs.

Pay 4 RB (medical bills) + 4 RB (legal fees) + 2 RB (police fine) and miss your next 8 turns.

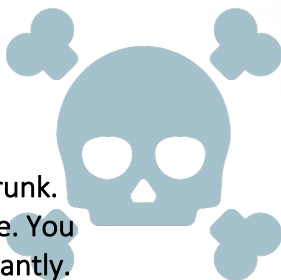

Road safety

Game cards

Print the cards and cut the cards out along the dotted lines.

You are driving home from a party drunk. You hit a car with a family of five inside. You and the family of five are all killed instantly.

Your family will have to pay 20 RB (legal bills).
YOU ARE DEAD AND ARE OUT OF THE GAME.

You are driving and your children are in the back seat arguing. You turn in your seat to scold them and run off the road. You are all fine but the chassis of the car is bent and have to take a day from work to take the car to the garage.

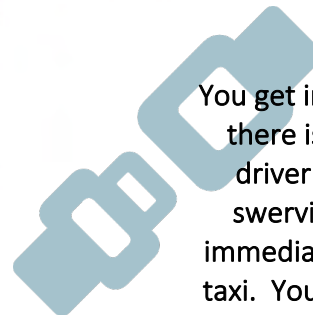

Pay 2 RB (towing costs) + 2 RB (car repairs) and miss your next turn.

You forgot your glasses at home but you need to get to the party as soon as you can. You cannot see very well, but you just squint and drive. You hit a parked car and your car spins in the road, hitting four pedestrians. You will have to pay their medical bills and take time off work.

Pay 4 RB (medical bills) + 8 RB (injured people's medical bills) + 2 RB (police fine) + 4 RB (car repairs) + 2 RB (insurance increases) and miss your next 2 turns.

You get into a taxi and once inside, you realize there is no seat-belt in the back seat. The driver is talking on his mobile phone and swerving wildly. You ask him to pull over immediately. You pay him and order another taxi. You learn later that the first taxi got into a road accident and two people were killed. You kept yourself safe.

Move forward 2 spaces.

Road safety

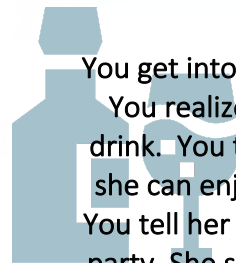

Game cards

Print the cards and cut the cards out along the dotted lines.

You get into your friend's car and she keeps giggling. You realize quickly that she has had too much to drink. You tell her to pull over and that you would like to drive so she can enjoy herself. She laughs and does so. You drive the car to your destination and keep her keys until she sobers up. You kept yourself and your friend safe from death or injury.

Move forward 2 spaces.

You get into your friend's car and she keeps giggling. You realize quickly that she has had too much to drink. You tell her to pull over so you can drive and she can enjoy herself. She laughs and tells you no. You tell her that if she refuses, you will not go to the party. She still refuses, so you buckle up and wait to exit the vehicle safely as soon as possible. You report her license number to the police. You set a tone of no-tolerance for drink driving.

Move forward 4 spaces.

Your helmet strap breaks while you are driving to work. You safely get to the side of the road and park your motorcycle. You call a taxi and head to the nearest shop for a new helmet. You kept yourself safe from death or injury.

Move forward 3 spaces.

You notice that your baby's safety restraint is showing signs of wear and tear. You consider to continue using it until it finally breaks but realise you want your baby safe. You ask your mother to bring a new safety restraint to you. You kept your baby safe from death or injury.

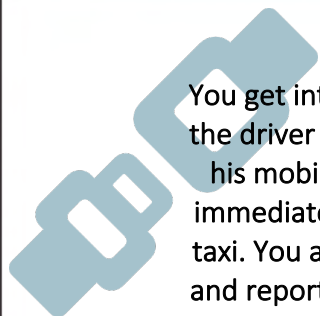

Move forward 4 spaces.

Road safety

Game cards

Print the cards and cut the cards out along the dotted lines.

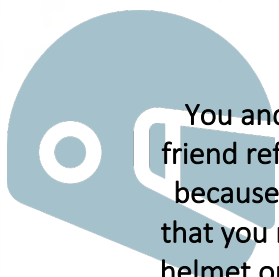

You get into a taxi and once inside, you realize the driver is smoking marijuana and talking on his mobile phone. You ask him to pull over immediately. You pay him and order another taxi. You also call the taxi company and police and report his condition and taxi number. You kept yourself safe and showed zero tolerance for taking drugs and driving.

Move forward 4 spaces.

You get on the back of a motorcycle for hire. The driver has his helmet sitting in top of his head – not over his head. He hands you a helmet. You ask him to put his helmet on safely and you will do the same. He refuses. You get off and find another driver/motorcycle. You kept yourself safe and tried to encourage safer behaviours.

Move forward 4 spaces.

You and a friend are going to a party. Your friend refuses to wear the helmet you give her because it will mess up her hair. You explain that you refuse to take her unless she puts her helmet on and fastens the strap correctly. She finally agrees. You kept yourself and your friend safe from death or injury.

Move forward 3 spaces.

You and a friend are going to see a movie. He is driving when he pulls out a marijuana joint and offers you a puff. You tell him that it will delay his response time in driving and ask him to put it down until you reach your destination. He agrees. You try to persuade him that taking recreational drugs is never a good idea when driving. You set a tone of no-tolerance for taking drugs when driving.

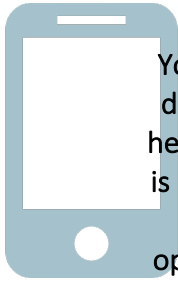

Move forward 3 spaces.

Road safety

Game cards

Print the cards and cut the cards out along the dotted lines.

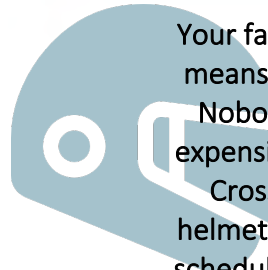

Your daughter is learning how to drive. While driving, she leans her seat back and takes out her mobile phone. You tell her that road safety is critical and that she is not able to use the car until she shows proper responsibility in operating the car. Your daughter tells you how mean you are and stomps away. You kept yourself safe and taught your daughter no tolerance for unsafe driving.

Move forward 4 spaces.

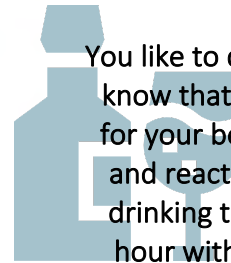

Where you live there are no speed limits posted. You remember that the limit is maybe 40 km/h on city streets and 80 km/h on motorways, so you try to stay within those limits. When you pass a school, you slow down even more because children are often running. Your friend makes fun of you for going so slowly, but you tell him that you want to be safe and keep others safe. You kept yourself and your friends safe as well as pedestrians and others on the road despite peer pressure.

Move forward 5 spaces.

Your family owns a motorcycle which is the only means of transportation for your family of five. Nobody owns a helmet because they are too expensive but after taking this course at the Red Cross, you convince your father to buy two helmets – all that he can afford. You work out a schedule of how your family can get to and from events using the two helmets. It is difficult but you are teaching your family safe driving behaviour.

Move forward 5 spaces.

You like to drink German beer but it is expensive. You know that more than one beer an hour is too much for your body to process and will affect your driving and reaction times. A friend offers to pay for your drinking tab if you promise to drink three beers an hour with him. You are driving your friend home. You say no thank you, because you want to keep yourself and your friend safe when driving, as well as pedestrians and others on the road despite the peer pressure.

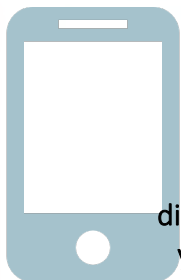

Move forward 5 spaces.

Road safety

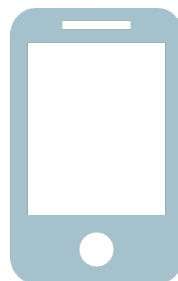

Game cards

Print the cards and cut the cards out along the dotted lines.

You use social media all day, every day. It is your favourite activity. You know that it is difficult to be phone-free even whilst driving, so you place your mobile in the trunk when you drive to eliminate distractions. You kept yourself safe.

Move forward 4 spaces.

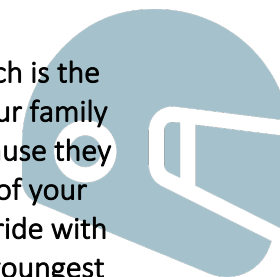

You love to talk on the phone whilst driving but you know it is unsafe. You get hold of an app that will not allow you to use your phone while driving. You kept yourself safe.

Move forward 4 spaces.

Your children are always fighting in the back seat. You tell them that if they fight, you will pull over to the side of the road and make them wait until they calm down before you resume driving. They hate that and thus allow you to drive distraction-free. You kept yourself and your family safe.

Move forward 4 spaces.

Your family owns a motorcycle which is the only means of transportation for your family of five. Nobody owns a helmet because they are too expensive. You are afraid of your husband and so simply continue to ride with four people and no helmets. Your youngest daughter is killed and your other two children are injured in a road accident on the motorcycle one day.

Pay 4 RB (medical bills) + 2 RB (police fine) + 8 RB (burial costs) + 5 RB (new motorcycle) + 2 RB (insurance increases) and miss your next 2 turns.

Behaviour change cards

Knowledge

Cut the cards out along the dotted lines.

My father told me about the dangers of drinking and driving. I now know that the best alcohol level in the blood is none at all. It is not fun to go out and not drink though! 	My husband and I watched a documentary about child restraints. We now know that our children need child restraints that are suitable for their age group, weight and height. 	My brother recently bought a motorcycle and he was informed by the dealer that he has to buy a good quality helmet to protect his head from injury. 	My friend had a car crash as she was speeding on the highway. I now know that respecting the speed limit would prevent me getting into a serious crash. 
A group of friends watched a television programme where a teenager was simulating texting and driving. They now know that this behaviour distracts them and could get them in an avoidable crash, but what to do if they receive an urgent phone call? 	I saw a sign at my school prom saying, "don't drink and drive". I am not sure what we can do about this. 	A Red Cross volunteer in our neighbourhood was telling us that we have to wear our seat-belts even if we are sitting in the rear seats. I did not think about that before. 	My mother always tells me that speeding is the most dangerous thing to do on the road, because it worsens the outcome of crashes. 
I think one can skip a few drinks on a night out in order to get back home safely. 	My husband and I think that we should get child restraints for our children, but they are expensive. 	My brother thinks that helmets can actually look cool, in addition to their protective properties. 	I would love to drive at appropriate speeds, but I am late most of the time and need to rush. 
The college friends agree that texting and driving is dangerous, but their parents worry a lot when they do not respond to their calls. 	I think that not drinking and driving is a good idea, but I will feel pressured by my friends to do so. 	We should start wearing the seat-belts in the rear seats. I will ask my dad to re-install them. 	With the road conditions and the number of reckless drivers out there, I think it is best to start modelling the good behaviour myself. 

Approval

Behaviour change cards

Intention

Cut the cards out along the dotted lines.

I will limit my alcohol intake to one per outing starting this weekend. That is below the legal BAC limit in my state. 	My husband and I asked our friends to lend us their used child restraints. We will be getting a new set tomorrow and installing them in the car. 	My brother searched online for a good quality and affordable helmet. He chose a great colour and he is so excited to wear it next Monday. 	Starting today, I will manage my time better, so I am not always in a hurry and have to speed. 
The college friends decide to talk to their parents about the possibility of them not answering their calls or texts when they are driving. 	Next week, I will tell my friends that we need to alternate being designated drivers. 	It turns out that my dad did not throw away the seat-belts. He will be re-installing them tomorrow. 	Life is too precious to lose it on the road. I will obey the speed limit starting today! 
I did well this weekend! I not only limited myself to one drink but made sure I ate well and drank water during my outings. 	The child restraints are up and running. The children each have their books in their hands and are well-occupied. 	My brother is happy with his snugly-fit helmet. He makes sure to buckle the straps up for a more secure fit. 	I am waking up 30 minutes earlier and I am driving to work at the speed limit. It is less stressful and frustrating! 
The college friends downloaded an application on their smart phones that blocks callers and silences notifications while they are driving. 	All my friends have tried being a designated driver. It is great being responsible for getting your friends home safely! 	Everyone is using the rear seat-belts in our family car. We will get used to it in no time. 	I have been obeying the speed limit for a month now, just as planned! 

Practice

Behaviour change cards

Cut the cards out along the dotted lines.

When I have to drive, I have been limiting my drinking to one per night and I am encouraging my friends to do the same. 	My husband and I realize how important our children's safety is and we will talk to our city council to put this as a priority and provide subsidized car seats to parents. 	All my brother's friends have these brightly-coloured, cool helmets on. 	Adding more time to my day by waking up earlier has become part of my routine. I certainly feel better about not having to speed to get to work on time. 
The group of college friends noticed that they have become calmer drivers after not having to use the phone while driving. They want to start a no texting and driving campaign in college. 	My friends and I are now offering rides home to people who look like they cannot be behind a wheel. 	My family members and I are now wearing the seat-belt on every seat and explaining to other passengers why it is important to do so. 	Obeying the speed limit has become such a habit that I even request other drivers to obey it too.
