Healthy life game instructions

In your team of five, you should have the following in your game packet:

- Healthy life game board
- Dice (buy these locally)
- Game pawns – use something found locally – paper clips, stones, coins, etc.
- 45 healthy life game cards
- These healthy life game instructions

Goal: The object of the game is to be the first person to reach the finish line.

To play:

1. Place the healthy life game board where all can see. Place all healthy life game cards in a stack
2. face-down at the edge of the game board.
3. Each player should identify a pawn and place it at the start line.
4. The youngest person in your group should go first.
5. On your turn roll the die and move forward the number of spaces indicated on the die.
6. Every time you roll and land on a space, simply pick up the first card at the top of the stack of
7. healthy life game cards.
8. They should read the card out loud and follow the directions on the card.
9. When finished, the next person rolls the die to start their turn.
10. Continue playing until one person reaches the finish line.

My neighbour has diabetes but has no money to pay for doctor visits. She is so depressed that she eats sugary treats all day and doesn't stop. I explain the risk factors to her and give her a hug. Move forward two spaces.

I visit my brother who smokes heavily. I breathe in lots of his second-hand smoke and now I don't feel well. Move back one space.

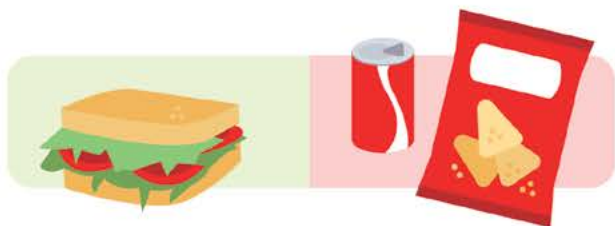

I only had a small piece of chocolate. Move ahead one space

I drink four glasses of alcohol every day because I think it will kill any bad germs. Move back two spaces.

My mother prepares a sandwich for me every day as my lunch and doesn't give me money any more to buy food. I get envious of my classmates who get money to buy their lunch - they buy anything they want like chips and sodas/sweet drinks. Since I don't have money, I often exchange my sandwich with my classmates' junk foods. My mother is disappointed and my health suffers. Go back two steps.

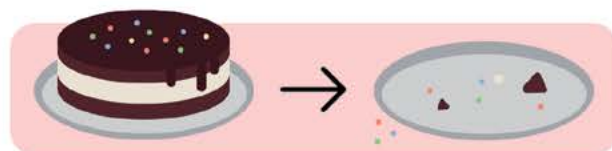

After classes, my mate invited me to prepare together for an exam. Upon going there, she invited me to smoke with her. I know that this is bad for my health and her health as well. But she said that she has been smoking for two months now and feels great, so I smoked the cigarette with her. Go back six spaces.

Our house is just five blocks away from my school. Instead of riding the bus going home, I would rather walk and save my money so I can buy myself the toy that I want. This is a good practice. Move three spaces forward.

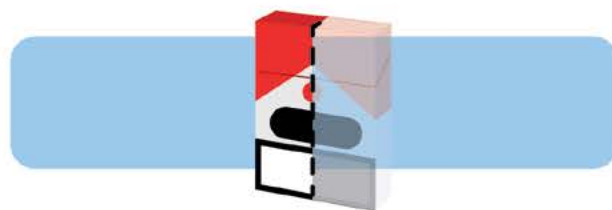

I am feeling so down I eat an entire chocolate cake. I now feel even worse. Move back two spaces.

I did some yoga today and my body feels fit. Move forward two spaces.

I only smoke half the number of cigarettes than usual. I feel better. Stay where I am.

I eat five servings of fruits and vegetables today. I feel good. Move forward one space.

My friend is diagnosed with NCD. To be proactive, I go to Red Cross Red Crescent for a clinical NCD assessment. Move ahead two spaces.

I choose fruit over candy. Move forward one space.

I eat a salad instead of a burger. I feel so much better about myself. Move forward one space.

I walk for 30 minutes every day. I save money by not taking a bus for my errands. Move forward two spaces.

I went for a walk today. Smile at the other players.

My father needs heart medicine. My brother needs money for school fees. If we choose the medicine, go back five spaces. If we choose the school fees, go back five spaces.

My girlfriend / boyfriend won't kiss me anymore because s/he says I taste like an ashtray. Move back one space.

A stranger at the store told me that I looked beautiful today. I feel great. Move forward one space.

My friend Tony is playing outside with our other friends in the neighbourhood. He has been calling me to join them but I'm too busy playing with my tablet in my room at home. This is not good. Move two steps backward.

I miss school because I don't feel well. Go back three spaces.

I don't snore like my obese sister. I feel great. Hug another player.

On my way home, I saw my friend Lito eating chips and drinking soft drinks at the nearby food outlet. He called my name and offered me his food. I know that chips and soft drinks are not healthy, thus I respectfully say no and go. I am proud of myself. Move two steps forward.

My mother stops smoking in the house because I am always telling her that even though she is the one who smokes, it is hurting her family as well. I breathe easier. I thank my mother and move forward two spaces.

I have not missed one day of volunteering in three years because of my good health. My supervisor tells everyone what a great volunteer I am. Move forward two spaces.

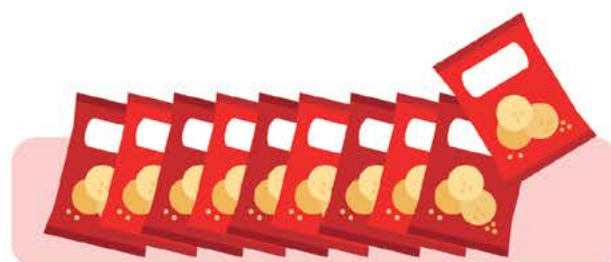

I am 15 years old, 4'9" (1m 45cm) tall and am weighting 145 lbs (66 kg). My classmates are bullying me and calling me names because of being overweight. I hate it when they do that to me. From now on, I will eat moderately and exercise for at least 30 minutes per day. This is good. Move four steps forward.

My boyfriend / girlfriend tells me that I am beautiful. Move forward one space.

I eat 10 bags of potato crisps on my bed with a bottle of soda. I haven't left the bed all weekend. Move back two spaces.

I go for two walks every day for 15 minutes each. I always feel better and sleep better afterwards. Move forward one space.

2x $\frac{15}{\text{minutes}}$ ☒

I don't do exercise because I don't feel like it. Move back one space.

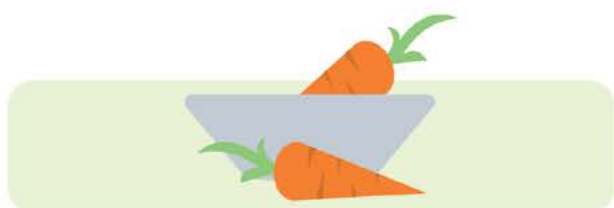

I ate five candy bars in an hour. Move back one space.

My obese sister was just diagnosed with diabetes. I show her how to prepare healthier meals. Move forward two spaces.

I really don't like to eat vegetables but I know that they will make me healthy. I try my best to eat by starting with small amounts each meal. This is good. Move one space forward.

I have tried to stop smoking but I am not from here and I have no one to give me support. I smoke three cigarettes in defeat. Go back three spaces.

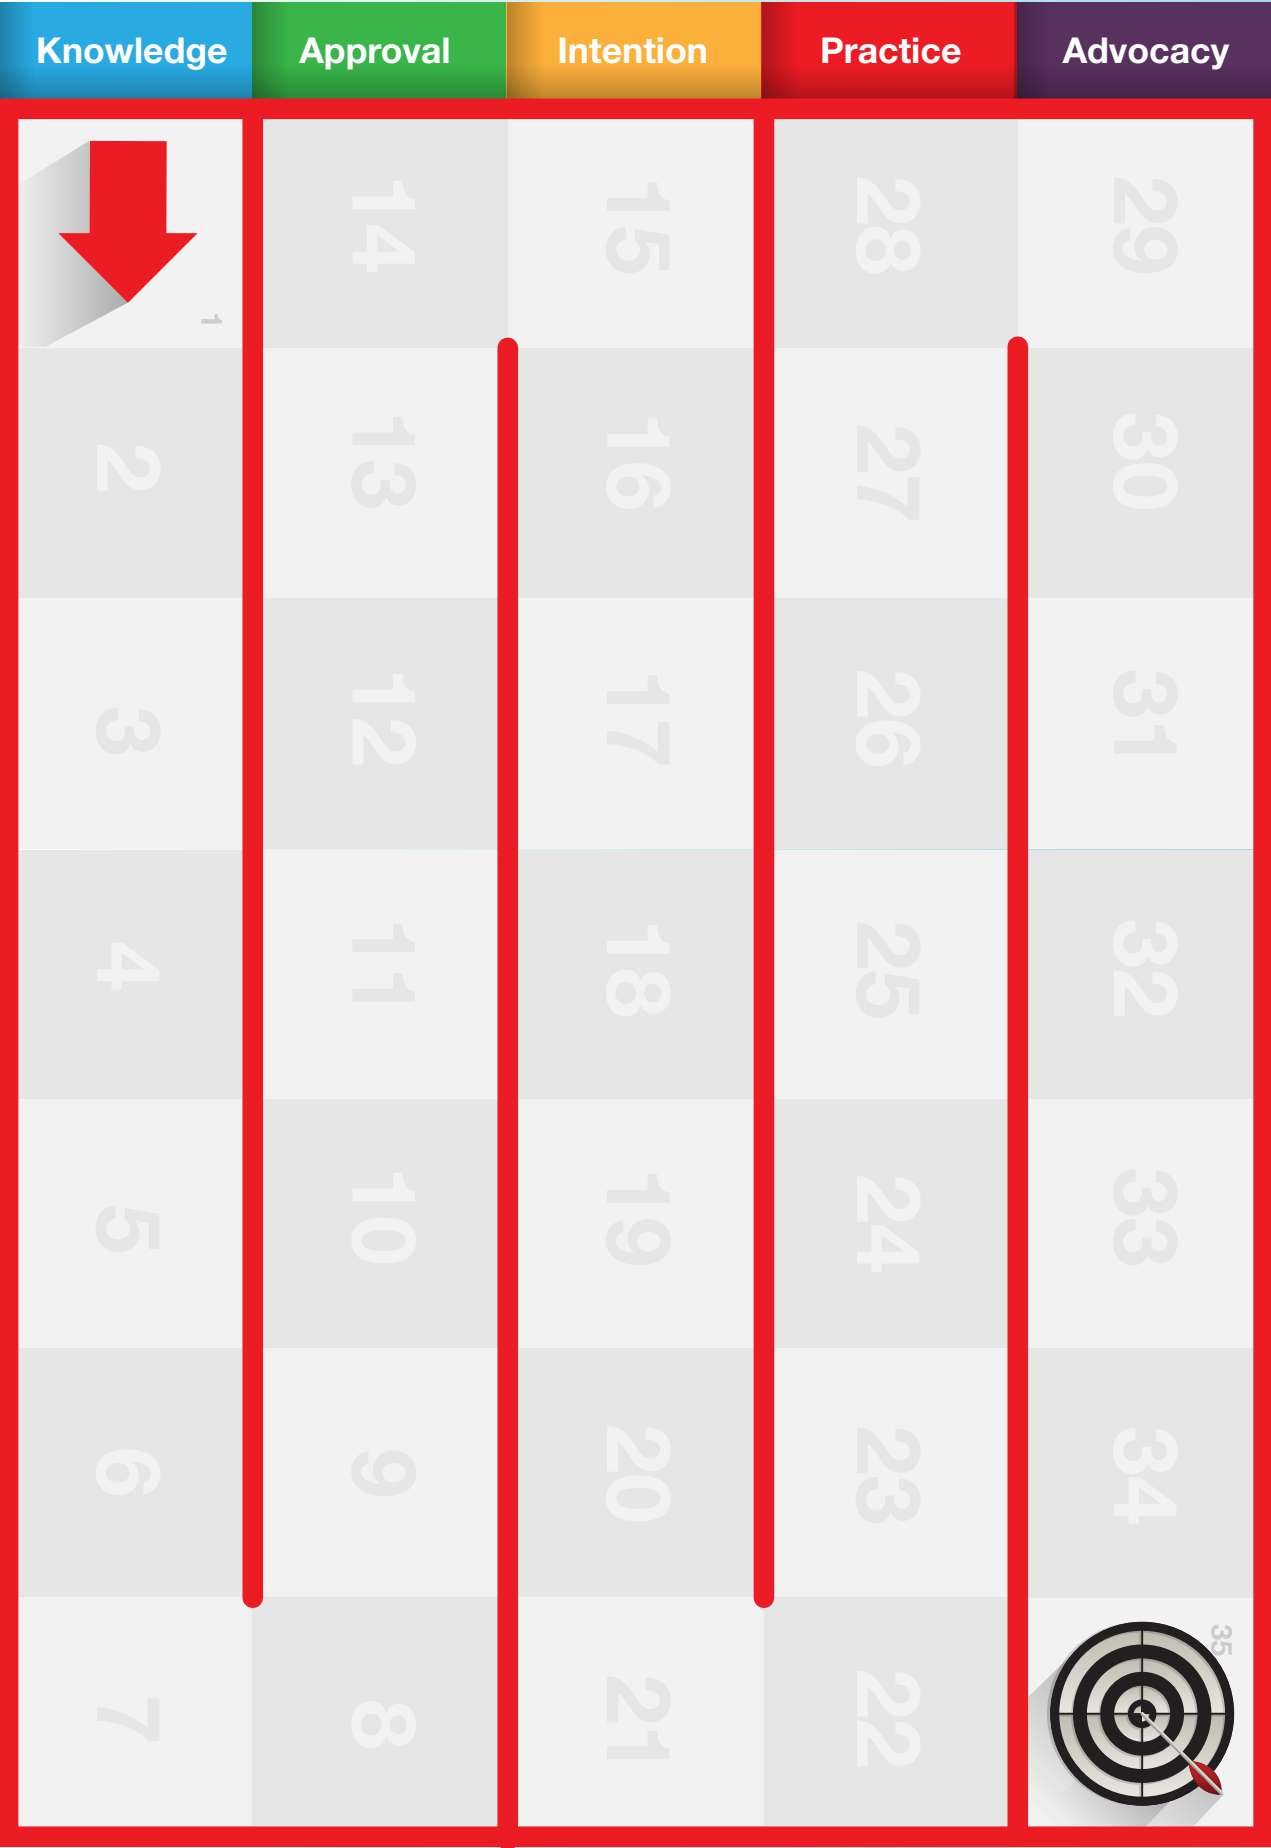

My baby sister is diagnosed with chronic lung disease from breathing my second-hand smoke. Go back four spaces.

I sign up to be a peer educator volunteer at my Red Cross Red Crescent branch. I am nervous but excited. Move forward three spaces.

Knowledge is the first stage and it is basically information about why a behaviour should be changed. The stage can include data and statistics about the consequences associated with continuing an existing behaviour. Knowledge is important as a first step, but is rarely enough by itself to get people to change.

Benny Ficiary attends a Red Cross youth session and learns all about noncommunicable diseases – something called NCDs. He learns that NCDs are not diseases he catches from someone else or gets from a mosquito bite, but what he might get if he stays on the sofa every day after school. Benny never really understood why people said that he should get up and move his body and he never understood why just sitting could hurt him. He knows that he is bigger than other kids his age, and now he understands that inactivity makes his body forget how to move – something his body needs to stay healthy and to fight off sickness.

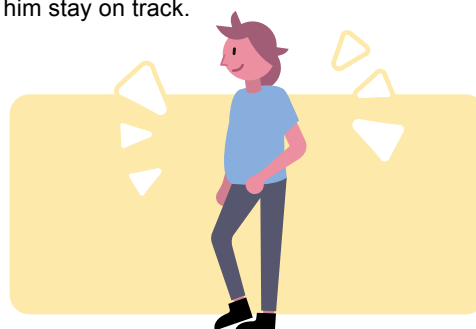

Approval is the second stage when a person has learned the new knowledge and agrees that it is a good idea, but makes no plans to apply the information personally. The person only agrees that they understand the knowledge.

Benny agrees that too much sitting on the sofa and watching TV is very bad for his health. But he really likes watching TV and sitting on the sofa. Besides he is young – he has plenty of time to change.

Intention is the third stage. Without intention, behaviour change is not possible. This stage is where a person takes their knowledge and personally decides that they want to apply it to their lives and that they will try to change their poor behaviour. During this stage, people identify their goal and their own motivation to adopt a healthier behaviour. Motivation is one of the most powerful elements for making behaviour changes.

Benny does not want to get sick. His father was very sick with diabetes and died last year. Benny knows that he is at high risk for an NCD as he is very overweight. He decides he will walk to school every day, starting next Monday. His goal is to lose weight by walking to and from school every school day. And if it is raining, he will take an umbrella. He also decides to only watch TV once he has walked for 30 minutes. He comes up with a plan for how to keep his motivation – he will pinch his belly fat every time he really does not want to go for his walk to remind himself that walking is good for his health. Benny's motivation is to live a long life and not die young like his father. For support, his sister agrees to back him and a volunteer agrees to ask him each week how he is doing, to encourage his efforts and help him stay on track.

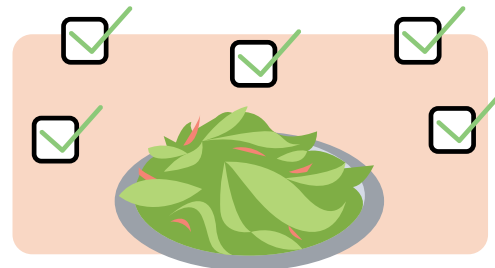

Practice is the fourth stage and involves the person actually applying the behaviour. They actually DO the behaviours that they committed themselves to doing. This is the most important step. The four conditions for a person to succeed in changing a personal behaviour include:

1. Defining a clear and simple goal.
2. Gathering sufficient and accurate knowledge to make a clear plan.
3. Having lots of personal motivation to follow through.
4. Having and relying on a supportive environment.

On Monday morning, Benny wakes up and remembers that this is the day he is walking to school. He immediately wants to sleep a little later and take the bus, but he sticks to his plan. He quickly gets dressed and walks to school. His feet hurt but every time he wants to stop, he pinches his belly fat. Each time he wants to stop and get on the bus, he thinks of his father. He realizes how hard this will be, but he is reminded of his motivation – to live a long life and not die at a young age like his father. He remembers what the Red Cross youth volunteer said about his muscles and his body and how they are already starting to get stronger after just one day of activity. When he gets home, his sister makes his favourite healthy dinner and tells him that she is proud of him. Benny feels encouraged despite how hard it is. He is proud that he did what he promised himself he would.

Advocacy is the fifth stage and is home to people who have reached their goal and who share their success with others trying to reach the same goal. People in the advocacy stage guide people in the other four stages to success with motivation, inspiration, and support. Red Cross Red Crescent youth volunteers can be seen as advocates. If the volunteer has not reached the advocacy stage personally for a behaviour change, they are still able to lead a community group but will take more of a facilitator role than a teacher role in leading sessions.

When a person has been successful in their practice of a new behaviour after three months, they can be at the advocacy stage. This does not mean that everyone is at the advocacy stage after three months but that this is the minimum amount of time that a person needs to successfully practise their new behaviours before they might be advocates. Each person and situation is unique.

Benny has been active for three years. The first three months of getting active were the hardest and every day he was exhausted. But he made it through. He lost weight and he now walks everywhere. He is meeting his goal and feels so much better about himself. He spends time with his friends doing activities outside like playing tag and walking along the beach. Benny is a peer educator now. He helps people to make a clear goal and to define their personal motivation for making this difficult change. He agrees to support them as they go through the difficult first few months.

HEALTHY LIVING WEALTHY BEING

FIVE STAGES OF BEHAVIORAL CHANGE

There are four conditions for success in changing a personal behaviour:

1. Defining a clear and simple goal

2. Gathering sufficient and accurate knowledge to make a clear plan

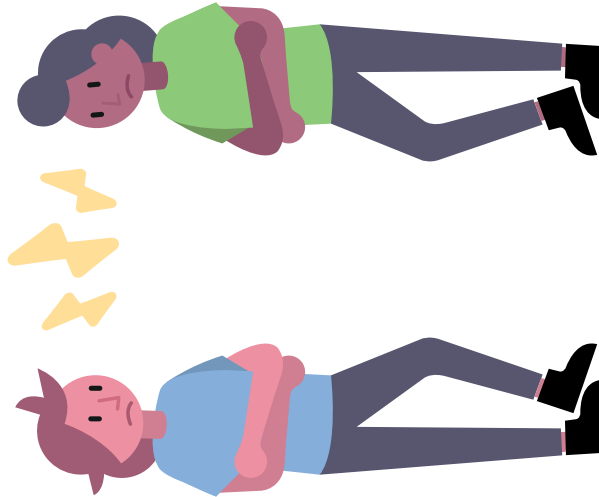

3. Having lots of personal motivation to follow through

4. Having and relying on a supportive environment

 

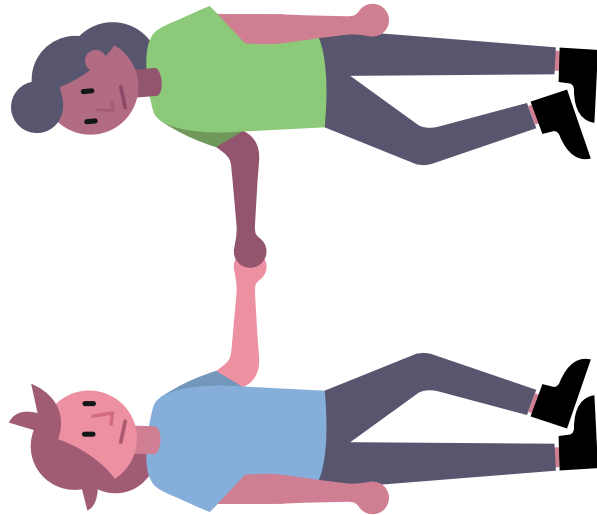

HEALTHY LIVING WEALTHY BEING

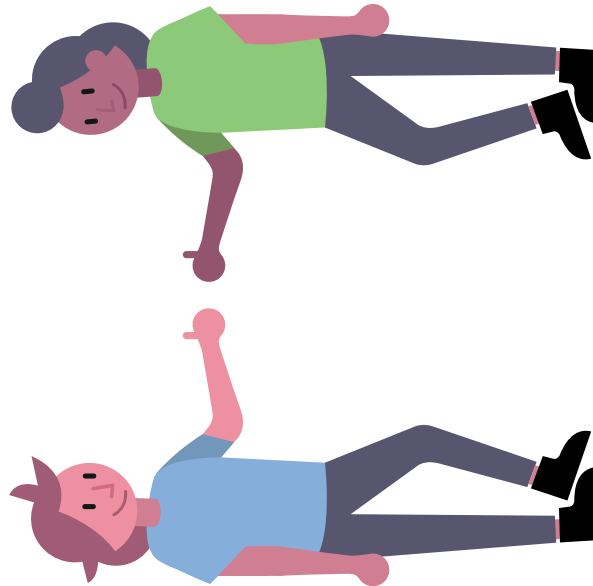

STAND OFF

COMPROMISE

CONSENSUS

COMMUNICATION SHEET

1

– Organizing your communications

- Be clear from the outset of the purpose of what you wish to convey
- Organize and clarify ideas in your mind before you attempt to communicate them
- Stay on topic
- Recognize people

– Thoughtfulness when communicating

- Choose the right time
- Choose the right place
- Remove distractions
- Thank the person or group for the time taken to listen and respond

COMMUNICATION SHEET

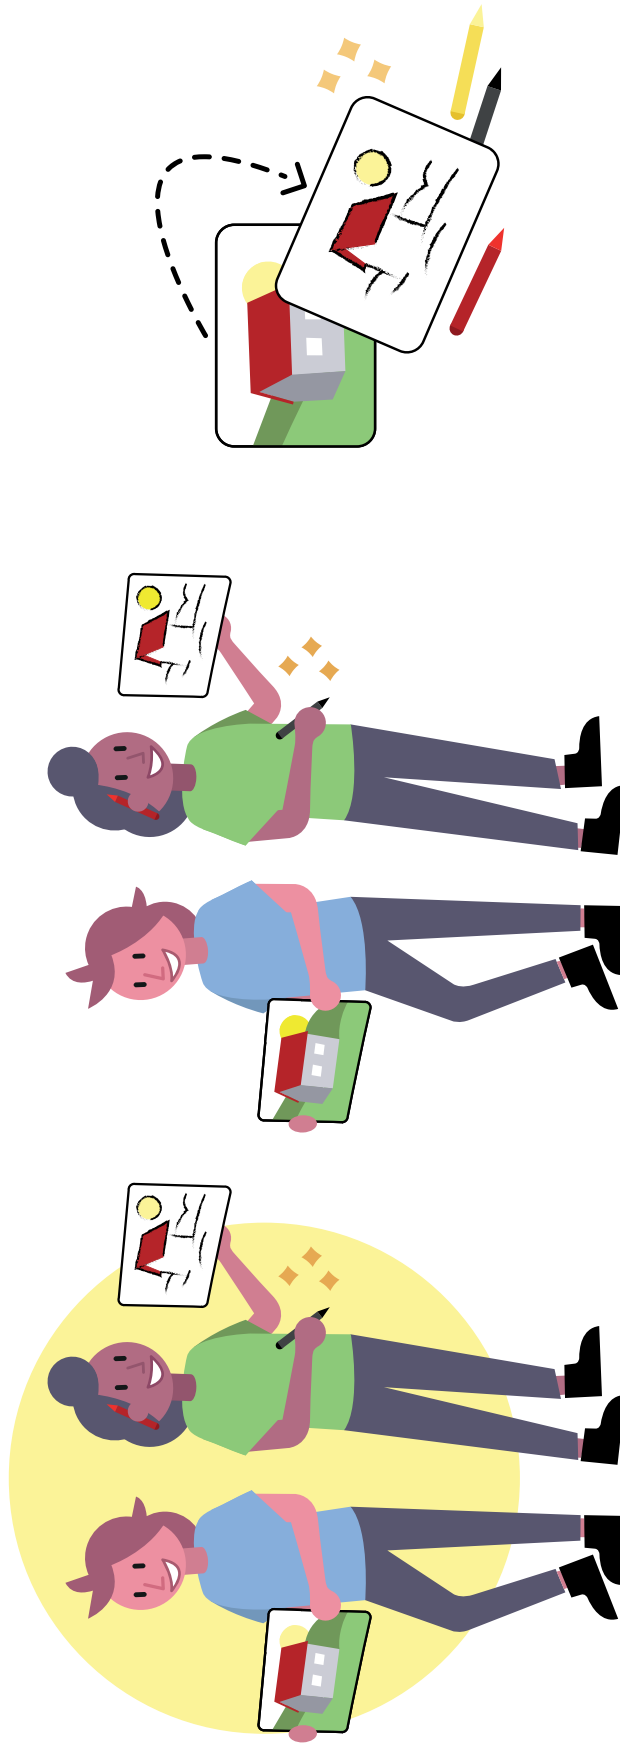

2

- There is effective verbal and effective non-verbal communication**

- Communicating through speech**
 - Be articulate
 - Listen actively
 - Be vocally interesting

- Communicating through body language**
 - Use facial expressions consciously
 - Communicate eye to eye
 - Use breathing and pauses to your advantage
 - Use hand gestures carefully
 - Keep a check on other body language signals

The team with the most points wins!					

**HEALTHY LIVING WEALTHY BEING**

CARDIOVASCULAR DISEASES

Cardiovascular Diseases are a group of problems that occur when the **heart & blood vessels** work out too hard to get blood through your heart and vessels bringing **oxygen** to your body.

WHAT CAUSES IT?

Unhealthy
Diet

Tobacco
Use

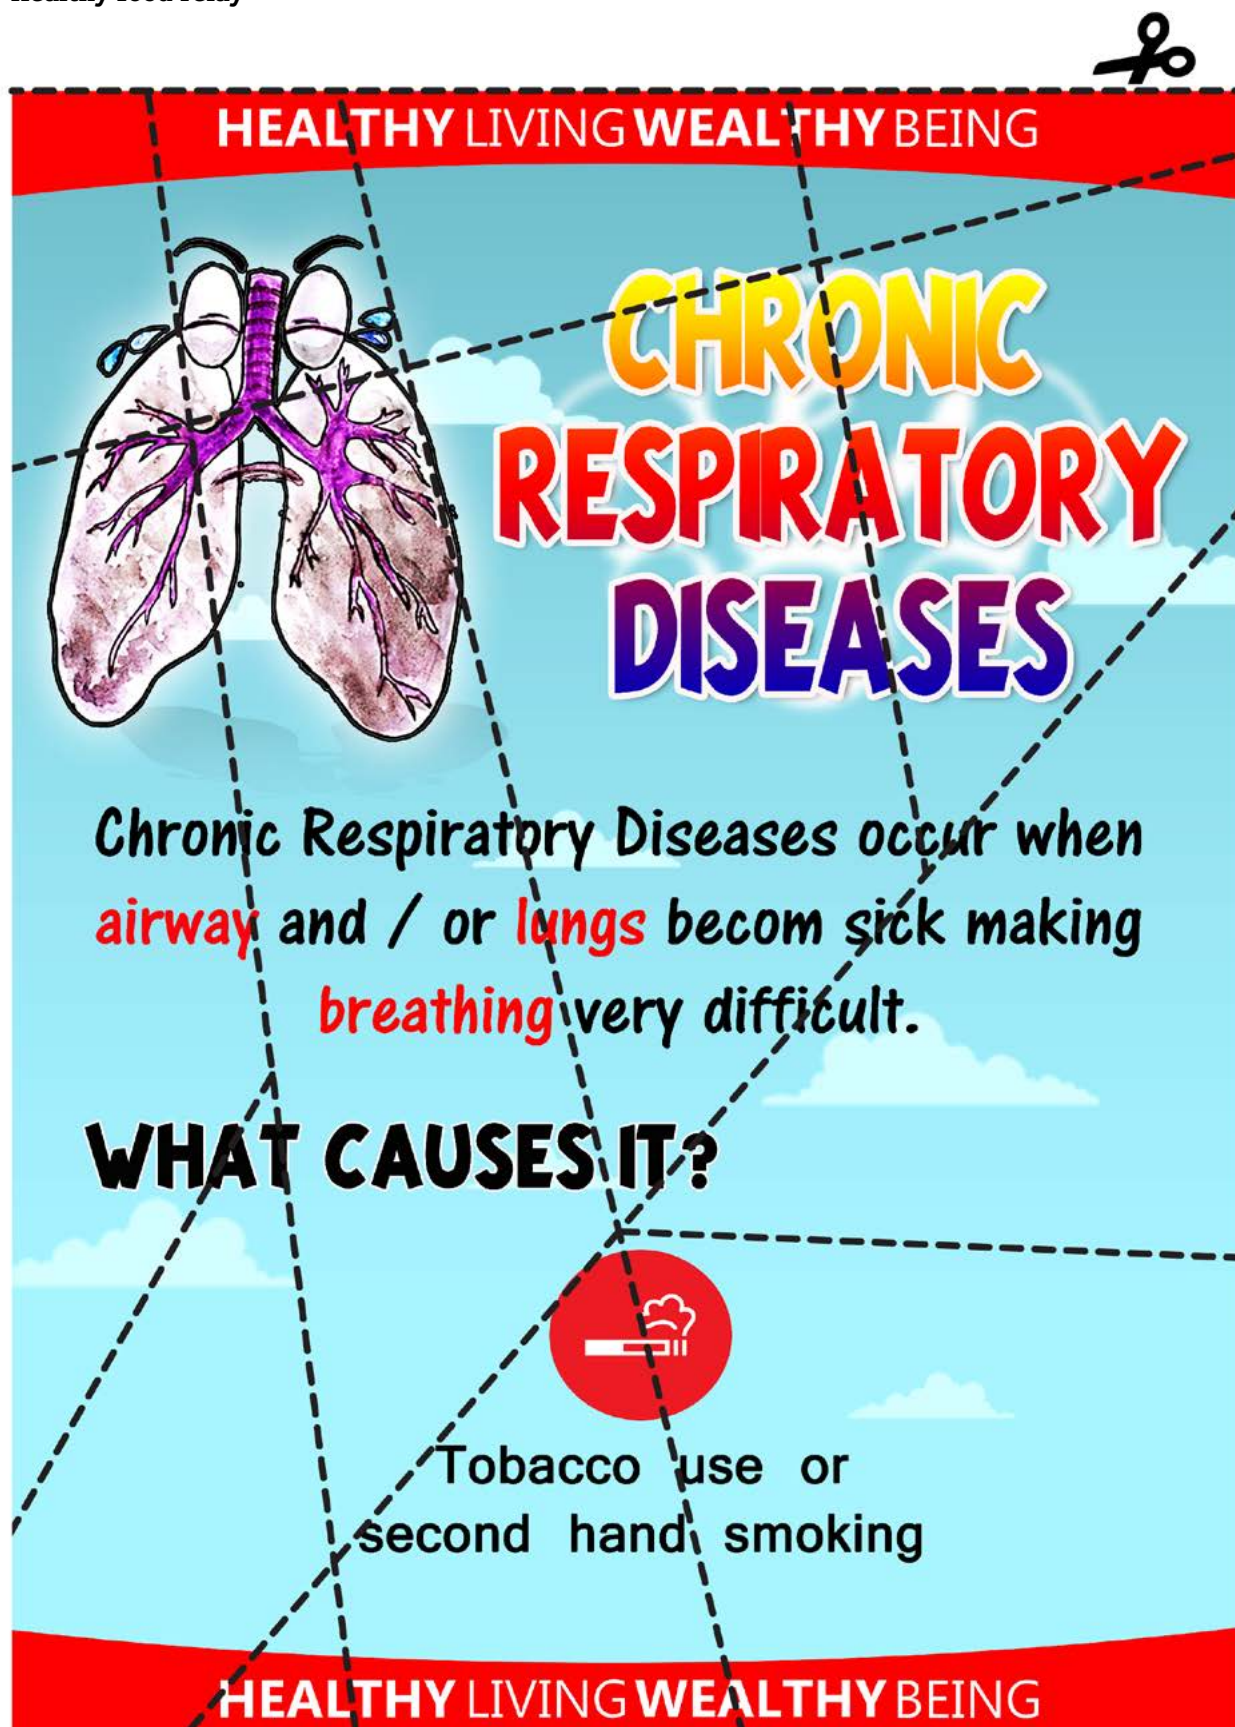

Physical
Inactivity

Excess
Alcohol

HEALTHY LIVING WEALTHY BEING

**HEALTHY LIVING WEALTHY BEING**

DIABETES

Diabetes occurs when your body **cannot control the level of sugar** in your blood. There are different types of diabetes, but the most common type called **TYPE 2**. It can affect people of any age, race, gender, or nationality.

WHAT CAUSES IT?

Unhealthy
Diet

Tobacco
Use

Physical
Inactivity

Excess
Alcohol

HEALTHY LIVING WEALTHY BEING

HEALTHY LIVING WEALTHY BEING

PHYSICAL INACTIVITY

Skin

Lack of nutrients leads to unhealthy skin and hair, exhaustion, headaches, low moods and difficulties in concentrating

Lungs

Produce less oxygen

Stomach and intestines

Can cause constipation

Heart

Your heart muscles grow weak and it becomes a strain to do basic activities

Bones

Can weaken bones and cause osteoporosis

Other organs

Your body becomes weak and more likely to become sick

Muscles and joints

When you do not use your muscles, you lose muscle mass. You gain weight easily and become weaker

HEALTHY LIVING WEALTHY BEING

HEALTHY LIVING WEALTHY BEING

UNHEALTHY DIET

Brain

Can cause feelings of exhaustion and/or depression

Mouth and teeth

- > Eating salt, fat and sugar triggers body to want more unhealthy fat, sugar and salt
- > Can cause cavities

Heart

Sugary and fattening food AND too much food can block arteries and make your heart work too hard

Stomach and intestines

- > Can cause constipation
- > Eating or drinking too much sugar puts undue stress on digestive system and causes body to store fat

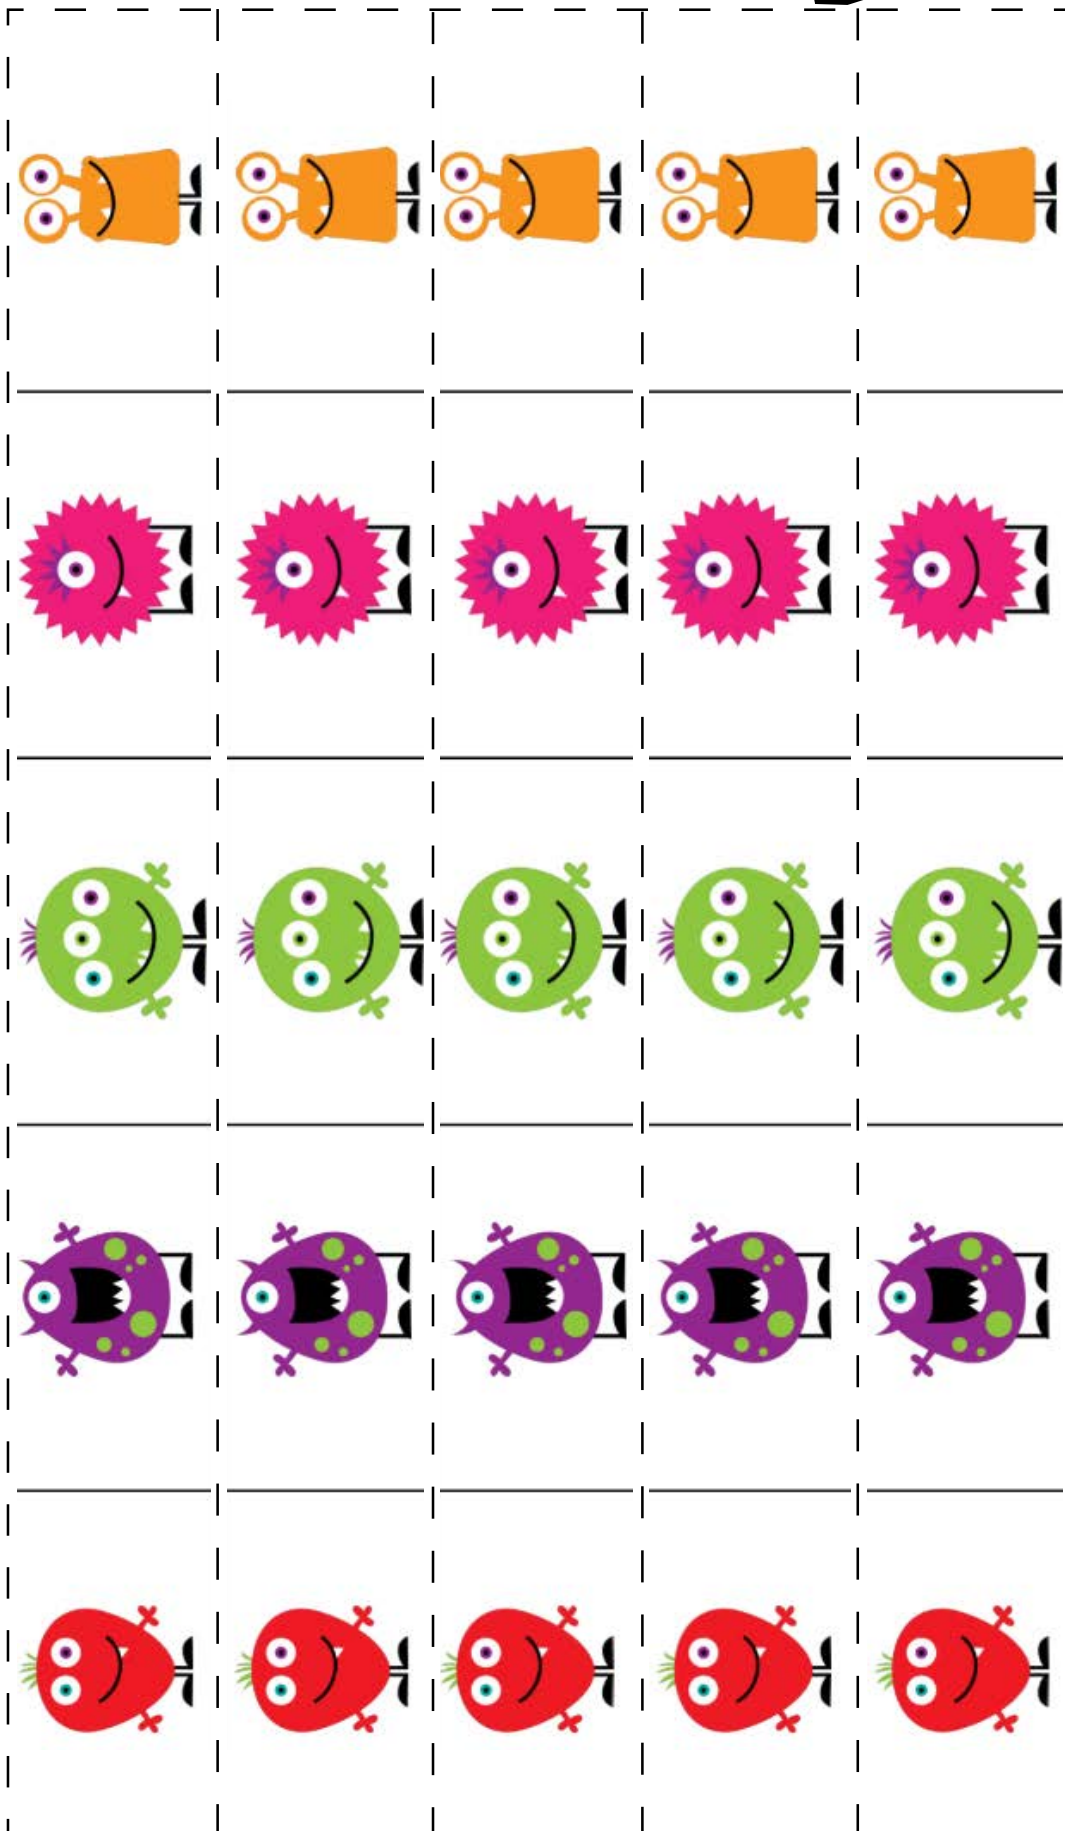

Other organs

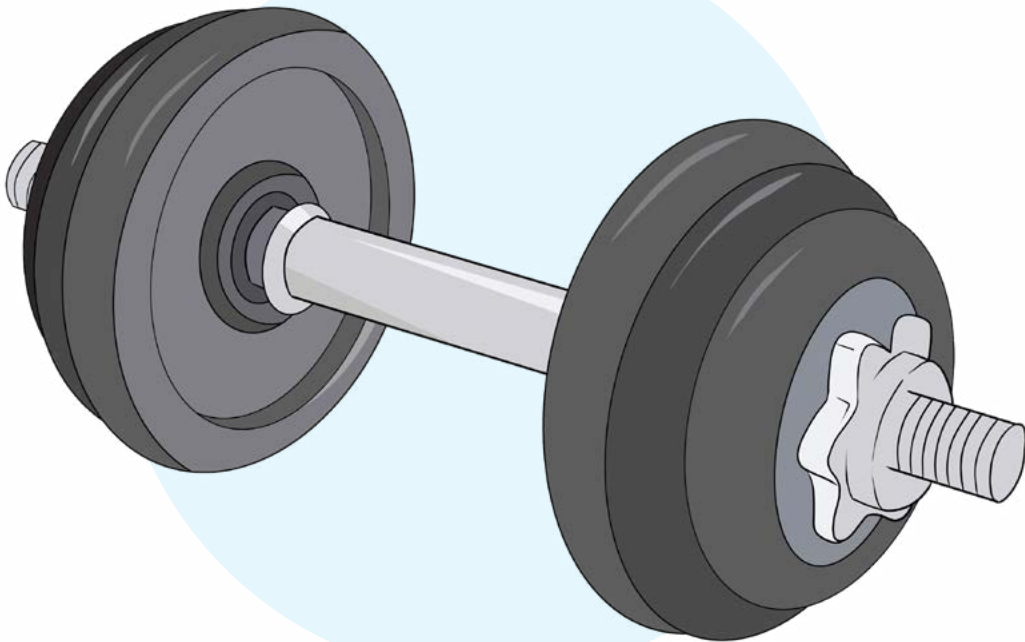

- > Can cause you to frequently become ill
- > Causes blood sugar to become imbalanced
- > Causes your cells to age faster
- > If an organ in your body does not have all the ingredients it needs from the foods you eat to do its job well, it simply will not do its job well or even at all and is much more likely to become sick and stop working
- > Increases adrenaline that increases body's level of stress

Name that activity

TEAM 1

Tool: Name that risk factor

Using any tobacco products	Having high blood pressure	Not being physically active for at least 60 minutes a day
Eating foods containing too much sugar	Living in an urban setting with lots of air pollution	Living in an area with poor air quality – indoors and outdoors
Eating fewer than five servings of vegetables and fruits every day	Eating instant noodles for dinner more than once a week	Having a fat belly
Eating food containing too much fat including fried foods	Drinking too many alcoholic drinks	Having high cholesterol
Breathing in second-hand smoke from a cigarette or a fire	Drinking drinks containing too much sugar	Not moving your body every hour when you are awake
Being overweight or obese	Spending more time playing a videogame or on social media than keeping your body active	Your genetics or family history of NCDs

Name that risk factor

TEAM 2 Tool: Name that risk factor

Living in poverty	My age	Using e-cigarettes
Being active only by eating and playing video games	Eating too much salt	Drinking only enough alcohol to feel “buzzed”
Eating too much fat	Smoking cigarettes	Eating doughnuts
Eating too much candy	Not sleeping at least eight hours a night	My gender
Using chewing tobacco	Eating too many fried foods	Spending more time alone than with friends
Eating processed foods every day	Eating at fast food restaurants more than once a week	Eating too many sugary foods

Do not print back-to-back

Theme

Alcohol

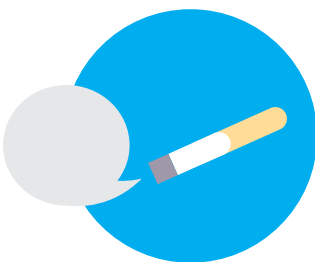

List of statements

Just one more ...
Sodas are just for women.
Drink up: it will make you feel at ease.
Real men drink it all.
Everyone else here is drinking, why don't you?
Everyone has already paid; it's up to you to buy the next round.
Party and drinking go together.
What are you afraid of? Only geeks don't drink.
Drinking is better than worrying about something.

Tool: Personal resilience NC
Do not print back-to-back

Theme

Tobacco

List of statements

Smoking makes you look way cooler.
You can't get addicted with the first few hits.
Just try it.
It won't hurt you, it's just from a plant!
Quit worrying - you're such a nerd.
What are you afraid of?
We're young- nothing's going to happen to us.
Girls like guys who smoke.
Girls who smoke look cool.
Smoking helps you lose weight.

Theme

Unhealthy Diet

List of statements

We're young - nothing's going to happen to us for a long time.
Just eat it - stop making such a big deal out of it.
Fries are made from potatoes – aren't potatoes vegetables?
A hamburger is protein - your body needs protein.
We're growing - we need the extra calories.
Soda isn't bad for us - if it was, why would they sell it in the school cafeteria?
Sugar comes from sugarcane - that's a vegetable, isn't it?
It's just baby fat - you can lose weight any time you want.
It's just this once – just eat it.
You had a rough day – you deserve it.

Theme

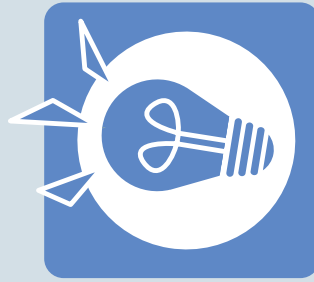

Physical Inactivity

List of statements

It's too hot to move. I hate to sweat.
My leg / arm / side / head hurts right now. Maybe later.
I need new gym shoes before I can do any physical activity.
But I'm so close to getting a top score on my game. Maybe later.
I want to go inside. I'm not comfortable right here.
I'm too fat to exercise.
I'm too skinny to exercise.
I need to get in better shape before I'm seen exercising.
I don't have any exercise clothes.
People look stupid when they are exercising.
I'm feeling lazy. Maybe tomorrow.

Five stages of behaviour change

1. Knowledge

2. Approval

3. Intention

4. Practice

5. Advocacy

There are four conditions for success in changing a personal behaviour:

1. Defining a clear and simple goal
2. Gathering sufficient and accurate knowledge to make a clear plan
3. Having lots of personal motivation to follow through
4. Having and relying on a supportive environment

of Red Cross and Red Crescent Societies
www.ifrc.org Saving lives, changing minds.

Roles: cut along the lines.

Each group receives all six role slips.

Tool: Playing My Role NC

ROLE – Red Cross Red Crescent youth volunteer

This volunteer teaches healthy lifestyle to a group of students every day after class. He was a chain smoker for five years and overweight, but after attending one Red Cross Red Crescent health education session, he realized he should stop smoking and should start eating healthy food. It was a struggle for him, but he has been living a smoke-free life and has maintained proper weight since then. Now as a volunteer, he is teaching the students and has become an inspiration to others on how to live a healthy life.

ROLE – Alexander

A Grade 10 student, who is very active with Red Cross Red Crescent and has been attending regular health education sessions. He also volunteers to promote healthy lifestyle to other students. His newest recruit is Eman.

ROLE – Eman

A Grade 7 student who is Alex's new recruit. He became interested in attending the health education sessions on healthy lifestyle because he would like to live a healthy lifestyle and would like to find ways to influence his older brother to live a healthier life since his brother is both a smoker and drinker.

ROLE – Siri

A Grade 7 student, who is the class valedictorian. She is always at the top of her class but she is being bullied by her classmates for being overweight. She loves to eat chips and soft drinks, and loves to play games on her tablet during her idle times.

ROLE – Jean

A Grade 9 student who is regarded as the "cool" guy in school. He is known to be a drinker and a smoker along with his group of friends. He started smoking and drinking two years ago. He has a younger brother, who recently joined the Red Cross Red Crescent and has been attending the health education sessions regularly.

ROLE – Khalid

Also a Grade 9 student who is part of the "cool" group in school. He has been best friends with Jean since 5th grade. He started smoking and drinking two years ago with his best friend when his father made them smoke a cigarette and drink beer. Since then, they have been drinking almost every day and smoking daily.

Scenarios: cut along the lines.
Each group receives one scenario.

Tool: Playing My Role NC

SCENARIO 1

Show how volunteers, Alex, Eman and Siri can influence Jean and Khalid to join and attend health education sessions and in the long run change their bad health behaviour and become advocates of healthy lifestyle.

SCENARIO 2

Jean has been feeling sick lately. He has been coughing and has been feeling out of breath for the past few days. He does not understand what's going on with his body. One day, he asked his brother, Eman what to do. He seems very eager to listen and seems to show signs that he is open to changing his lifestyle. Show how Eman can help his brother, Jean and how Alex and Siri can also help Jean live a healthier lifestyle.

SCENARIO 3

Alex, Eman and Siri were seen by Khalid walking on their way home from their afternoon health education classes. Khalid called out their names and asked them to join him with his drinking session. How should Alex, Eman and Siri reject Khalid's prodding without offending him?

SCENARIO 4

Together with Eman, a Red Cross Red Crescent youth volunteer visited Siri because Jean and Khalid are influencing students Alex, Eman and Siri to join them in drinking and smoking. Show how Alex, Eman and Siri resist the temptation positively (without offending best friends Alex and Eman), and make them change their bad health behaviours?

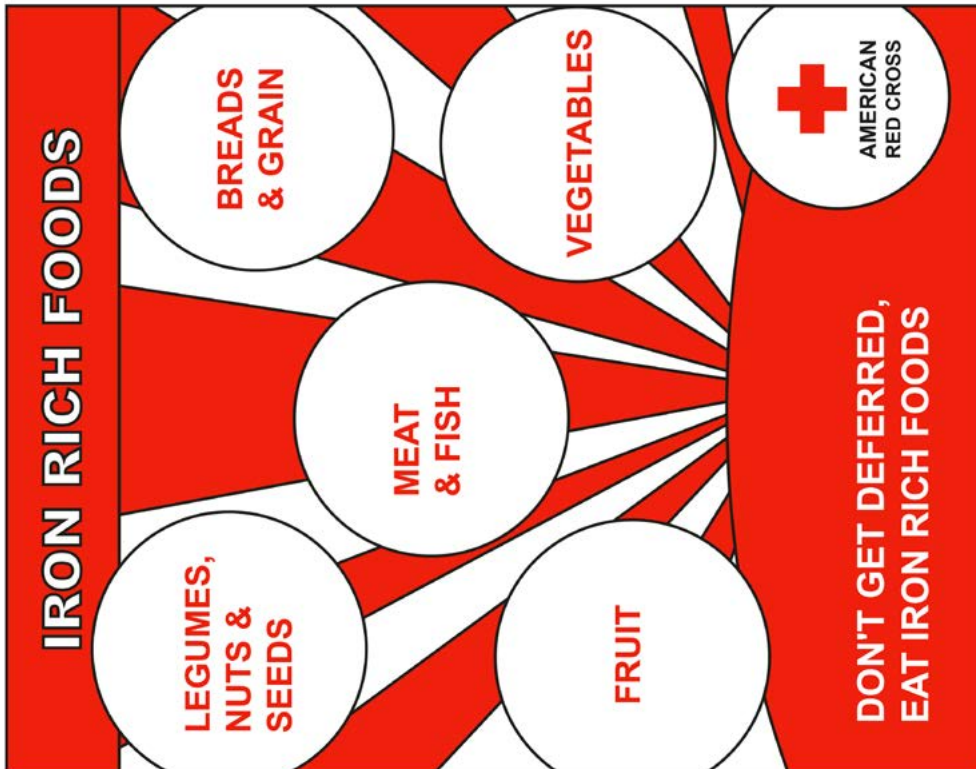

SCENARIO 5

The Red Cross Red Crescent youth volunteer was recently assigned to a new school where she will teach healthy lifestyle to a group of secondary students. During assessment, the students wrote down their health goals. Show how the volunteer can help them successfully achieve their goals and get through each step of behaviour change.

Character descriptions

Tool: Someone Else's Shoes NC

You are studying IT at university with a full timetable, a girlfriend, a small apartment, a car and a motorcycle with a boyfriend on the side. You have no time for exercise.	You are a nine-year-old homeless boy whose family died in a typhoon. You sometimes go to the Red Cross Red Crescent office even though they give you disgusted looks.
You are an obese woman with a wealthy father living overseas, but you are discriminated against while searching for a qualified job in your capital city.	You live at home with your parents. You are morbidly obese and are secretly four months pregnant.
You are a very good-looking young man, with a part-time job, living with your mother and you steal cigarettes from the local shop.	You are a 14-year-old student and athlete who is very popular at school.
You are a young, ambitious and homosexual Red Cross Red Crescent volunteer, with good grades, looking for a partner and living in a very religious area in the capital city.	You are a very quiet and small 16-year-old boy whose parents are both deceased. You live with your auntie who has diabetes and whom you care for after school.
You drink way too much alcohol. You are thinking of dropping out of school so you can get a job to pay your own and your family's debts.	You are a 15-year-old girl who is very self-conscious about your body and looks. You think you are fat but boys give you a lot of sexual attention.
You are a 15-year-old physically challenged girl who needs a wheelchair to get around. You can't do the physical activity that everyone else does.	You are a 14-year-old girl living with your mother and younger brother. Your mother has cancer and you work at two jobs to pay the bills.
You are a young woman and you practise a religion which is not common in your country. You just moved to the capital city. You are worried about being discriminated against because of your religion.	You are 12 years old and you have become addicted to the cigarettes that your father shares with you. It started as a joke and now you smoke six cigarettes a day.
You are a 17-year-old student who wants to go to medical school and is involved in sex work to raise money.	You are 13 years old and you sneak alcohol from your parents' cabinet. You got so drunk last week, you passed out on the way to school.
You have not eaten a vegetable in three years. They taste disgusting and even if they make you healthier, you physically gag when you taste them in your mouth.	You play nine hours of video games every day after school. On Fridays and Saturdays, you play video games until 3 a.m.. Your mother says it is safer than being on the streets.
You are 12 years old and you are obese. The streets of your city / town are so crowded and it is so hot outside – you would rather stay inside with a cool drink and watch TV. Your mother says that she will take care of you if you get an NCD, so it is ok.	You are a 13-year-old immigrant who arrived in the country last year. People are nice but you do not really have any close friends. You cry yourself to sleep at night and eat candy bars.

List of possible questions

Tool: Someone Else's Shoes NC

- Are you considered a non-threat to other people?
- Do you have a healthy diet?
- Do you do any physical activity?
- Are you a bad influence on others?
- Do you have access to education?
- Do you feel supported?
- Do you have friends?
- Do you have family members who love you for who you are?
- Do you have devoted friends willing to help and support you under any circumstances if your life is troubled?
- Do you have people to talk to about your problems?
- Do you live in a safe neighbourhood?
- Do you feel safe walking on the streets after dark?
- Do you expect that you and your body will be treated with respect and dignity at school without fear of harassment?
- Do you expect to be financially well-off, able to travel and retire comfortably when you become an adult?
- Can you easily improve the quality of your life?
- Can you spend 10 USD weekly as a treat for your friends?
- Can you easily communicate to others whom you have just met?
- Can you or your family members openly talk about your physical or mental health?
- Can you expect openly and easily to speak about your sexual orientation / religious practices / cultural practices at school without fear of harassment or negative consequences?
- Do you imagine that you will go to university and become a professional and leader in your community?

Good effects of healthy lifestyle to self, family and community

Characteristics of a supportive environment

The World Health Organization explains that health cannot be separated from other goals in your life. There are strong links between you and the environment where you work, learn and play. WHO tells us that we must take care of each other, our communities and our natural resources to live healthy lives.

Characteristics of environment that supports healthy living include:

Strengthening community actions. This includes setting priorities, making decisions, planning strategies and doing them to achieve better health for the community. Youth are often at the heart of the community and can be powerful agents of change for the whole community.

Developing personal skills. By building your skill set, you increase your options to have more control over your health and your environment and to make the best choices for health. By having the opportunity to learn throughout your life you prepare yourself for all life stages and you can better cope with any illness or injury that affects you. Personal skill development happens at home, school, work and within the community and is achieved when everyone works together.

Linked health services must do more health promotion and support the needs of individuals and communities for a healthy life. Health services should open communication between the health professionals and the environment where we work, live and play.

Identifying barriers in your environment. By understanding what blocks access to healthy options, community members can address these barriers and work to improve access to healthy options and make it harder to get less healthy options. This might be removing trash from the street to allow people to walk, ending unhealthy food options at markets and snack vendors or refusing to sell tobacco products to people under the age of 18.

Group A

NCDs are noncommunicable diseases and they include diabetes, cancer, cardiovascular disease and chronic lung disease. NCDs usually occur when a person consistently practises poor health behaviours like tobacco use, harmful use of alcohol, eating too many unhealthy foods and/or being physically inactive.

Group B

NCDs are diseases that **CANNOT** be spread through contact with other people or animals that are sick.

NCDs are the number one killer in the world, with over 63 % of all global deaths due to cardiovascular and chronic lung diseases, cancers and diabetes.

Group C

Cardiovascular diseases are a group of problems that occur when the heart and blood vessels work too hard to get blood through your heart and vessels, bringing oxygen to your body. Cardiovascular diseases are mainly caused by a blockage that prevents blood from flowing to the heart or brain.

This blockage is often caused by tobacco use, harmful use of alcohol, eating too many unhealthy foods and/or being inactive.

Telephone

Group D

Cancer occurs when a single cell in one part of your body starts to grow abnormally and then grows uncontrolled in your body.

Tobacco use, harmful use of alcohol, eating too many unhealthy foods and / or being inactive can lead to many kinds of cancers.

Group E

Chronic respiratory diseases occur when your airway and / or lungs become sick and make breathing difficult.

Chronic respiratory diseases can occur when you use tobacco, drink too much alcohol, eat too many unhealthy foods and / or inhale too much smoke when another person is smoking nearby or from the smoke from burning wood or from charcoal-burning stoves.

Group F

Diabetes occurs when your body cannot control the level of sugar in your blood.

There are different types of diabetes, but the most common type is called Type 2 diabetes. People who have excess body weight, eat too much sugar and / or are physically inactive are at higher risk for Type 2 diabetes.
